Pennsylvania Higher Education Assistance Agency

and

Jerry S. Davis
Director of Research and Policy Analysis
Pennsylvania Higher Education Assistance Agency

ACKNOWLEDGEMENTS

This is the sixth year that PHEAA has produced the NASSGP annual report. The annual collection, analysis, and reporting of these data are no small tasks and none could have been accomplished without the support of several persons and agencies. We want to acknowledge their contributions here.

Without the cooperation and support of the NASSGP member agencies, who each year respond to a lengthy survey, completion of this report would be impossible. We are thankful for this support. We also appreciate the advice and suggestions of many readers whose comments over the past five years have lead to improvements in the reports.

The PHEAA Research and Statistics staff devotes a great amount of attention, energy, and effort to collecting and compiling survey responses. The assistance of Lynn Crone, Michelle Kinard, Debbie Heberle, Miriam Cooper, and Marsha Jenakovich in these tasks is much appreciated. Darlene Kerstan and Cheryl Rudy of PHEAA's Word Processing Center typed the voluminous tables and much of the text for this report and the earlier ones.

Finally, we acknowledge the members of the financial aid community whose continued interest in and use of this report makes the final product worth our collective efforts.

Kenneth R. Reeher

SECTION I SURVEY SUMMARY AND HIGHLIGHTS

This year's survey revealed significant trends and collected interesting data which are described in the texts and tables on the following pages. The highlights of the survey findings are described in this section of the report.

In 1985-86, states expect to award \$1.5 billion in grant aid to over 1.6 million students in postsecondary education. This represents a growth rate of approximately seven percent over the last year's \$1.4 billion. Almost 86 percent of this aid will be received through comprehensive and need-based programs administered by NASSGP member agencies. Non-need-based aid from these agencies represents another nine percent of all the grant aid identified by the survey.

The most important finding of this survey is that aggregate need-based aid for undergraduates is expected to increase by more than eleven percent for the second consecutive year. The annual growth rates for the past two years have been greater than annual growth rates since between 1975 and 1976. However, this year's expected growth patterns are less dramatic than those exhibited between 1983-84 and 1984-85. For example, 14 states estimated no program dollar growth (with four expecting losses) and another eight states estimated growth rates of less than five percent. Eight other states expected growth rates of between 5.0 and 4.9 percent and 22 states expected growth rates to exceed ten percent. This is in sharp contrast to last year, when 47 states/territories reported at least some increases between 1983-84 and 1984-85 and 27 reported increases in excess of ten percent. This year college costs increased at a greater rate than program dollar volumes in over half the states. This is not unusual. Between 1979-80 and 1985-86, 1983-84 and 1985-86, and 1984-85 and 1985-86 college costs paid by grant recipients grew at greater rates than grant dollar volumes in over half the states.

The "long-term" trends in state need-based aid to undergraduates, i.e., between 1979-80 and the present year, show that annual growth in states' programs is sporadic (only Illinois, Rhode Island, and Vermont experienced growth in every year during that period) and that it is unusual for the growth to keep pace with growth in costs. However, although growth in grant dollar volumes is sporadic and typically below growth in costs, in the two most recent years more states are adding more dollars to their need-based programs than ever before.

The survey revealed that need-based aid recipients' characteristics are changing in significant ways. More part-time students are receiving state grants. Increasing proportions of grant recipients are older than the traditional "college age" population. Increasing numbers and percentages of recipients are enrolled at non-collegiate postsecondary institutions, typically proprietary schools. Decreasing numbers and percentages of recipients are Black students. Between 1981-82 and 1985-86, the percentage of state grant recipients who are Black decreased from 25.1 percent to only 17.8 percent. This trend is a reflection of the dramatic and recent decrease in postsecondary education participation rates of Black high school graduates throughout the nation.

Need-based aid to graduates and professional school students continues to increase but at only a modest rate, by less than 12 percent since last year and

less than 15 percent since 1981-82. Fewer than half the states (23 in all) report need-based programs for post-baccalaureate students. This year approximately 26,000 students will receive \$19 million from these programs. Another \$11 million will be awarded to 4,100 graduate/professional school students through the non-need-based grant programs of 20 states. Most of these students will be preparing for the health professions. State grant support of graduate/professional school students is very modest in comparison to support of undergraduates.

Slightly over half the states (28 in all) report non-need-based grant aid programs for undergraduates. These programs expect to award \$127 million to 213,000 students in 1985-86, representing a 7.3 percent increase over last year's \$118.4 million awarded to 235,000 students. Over 56 percent of this year's non-need-based grant aid will be awarded through the "tuition equalization" grant programs of seven states. About 85,000 students will receive \$35 million in non-need-based merit scholarship programs operated by 15 states. The annual growth rate of these programs was less than it was for the generally available need-based programs, 9.7 percent as compared to 12.0 percent.

Some states are considering new aid programs for 1986-87 and 1987-88. Four plan to implement merit-based scholarship programs and another four plan to implement new state-supported work-study programs. Two additional states said they might implement work-study programs if SSIG funds to do so were made available. Many states recently have implemented or soon will implement "loan forgiveness" programs of one kind or another for teachers, prospective teachers, or persons serving other state manpower interests. At least 35 such programs in 26 states are operational for 1985-86.

The survey revealed that changing the SSIG program legislation to permit use of its federal allocations to support state work-study programs could lead to the creation of between nine and fifteen new student employment programs. The study also showed that "zero-funding" of the SSIG could lead to total loss of need-based grant aid programs in nine states.

This year, as in preceding years, the survey showed that the large majority, over 84 percent, of all state grant aid continues to be awarded by the sixteen states with the largest dollar volumes. Six states continue to award less than \$1 million each year and 16 continue to award less than \$1 million in need-based grant aid to undergraduates.

SECTION II COMPARATIVE PROGRAM STATISTICS, 1984-85 AND 1985-86 AND EARLIER YEARS

In 1985-86, states expect to award \$1.524 billion in grant aid to students through one or more of their programs (see Table 1). About 86 percent of this aid will be awarded to undergraduates and graduate/professional school students through need-based programs administered by NASSGP agencies. These agencies will award another nine percent of the aid through non-need-based programs and the remaining five percent will be awarded by other state agencies, institutions acting in behalf of the state agencies, or by other means.

Nine states will award over \$50 million each, for a total of \$1.09 billion or about 72 percent of all grant aid awarded by all states. These nine are, in rank order of dollars awarded: New York, Illinois, California, Pennsylvania, New Jersey, Massachusetts, Michigan, Ohio, and Minnesota. Six states will award between \$20 and \$50 million, for an aggregate of \$187.6 million or about 12 percent of all the aid identified by the survey. The six states are, in rank order of dollars awarded: North Carolina, Indiana, Florida, Wisconsin, Texas, and Iowa. Therefore, 15 states are expected to award about 84 percent of the aid.

Ten states (Colorado, Connecticut, Oklahoma, Virginia, Georgia, South Carolina, Maryland, Tennessee, Puerto Rico, and Oregon) plan to award between \$10 and \$20 million, for an aggregate of \$152.2 million, or about ten percent of the grant aid. Another eight states will award between \$5 and \$10 million, for an aggregate of \$65.89 million, or about four percent of the total. These states are: Washington, Missouri, Kentucky, West Virginia, Rhode Island, Vermont, Alabama, and Kansas. The remaining 19 states will award less than \$5 million each and collectively less than two percent of all the grant aid.

These data show that the vast majority of the state grant aid is awarded by a relatively small number of states. Just the three states that award over \$100 million award 44 percent of all the aid. Or, from another viewpoint, the 26 states whose program volumes rank in the top half of all states award 94 percent of all the aid.

Undergraduate Need-Based Aid

Table 2 displays the data for NASSGP member agencies' need-based comprehensive grant and scholarship programs for undergraduate students. For the third consecutive year aid awarded through these programs will exceed \$1 billion. The expected award volume of \$1.292 billion represents a twelve percent increase over last year's \$1.154 billion. The total awards for earlier years were: for 1983-84, \$1.035 billion; for 1982-83, \$958 million; and, for 1981-82, \$889 million.

This year's expected 12.1 percent growth rate exceeds last year's 11.4 percent growth rate. It should be noted, however, that program estimates of growth almost always exceed actual real increases. For example, the 1984-85 dollar volume was estimated, in Autumn of 1985, at \$1.195 billion but the actual volume as reported in this year's survey was only \$1.154 billion, or about 3.4 percent less than expected. Therefore, it is likely that the real growth rate of 1985-86 will parallel the growth rate of 1984-85. Nevertheless, the aggregate growth rates of 1984-85 and 1985-86 will be much larger than annual growth rates

of earlier years. Between 1981-82 and 1985-86, aggregate need-based aid to undergraduates is expected to grow by \$403 million or about 45 percent. It is especially significant that 64 percent of this growth has occurred in just the past two years. This laudable growth should be evaluated, however, against growth in costs paid by grant recipients during the same time period. On the average, costs at four-year private colleges, whose students received nearly half the need-based aid, grew by 40 percent between 1981-82 and 1985-86. Average costs of attendance at four-year public colleges, whose students receive about a third of this aid, grew by about 37 percent. Furthermore, it should be noted that \$189 million of the \$403 million growth occurred in the four states with the largest programs: New York, Illinois, California, and Pennsylvania. The growth in New York's program alone accounted for \$100 million of the \$403 million increase.

Because program dollar growth in just a few states with larger programs has a great impact on aggregate dollar growth rates, it makes more sense to compare annual growth rates by states. This year, on the average, costs at four-year colleges increased by about seven percent for most programs' aid recipients. Only 22 states (42 percent of the 52 states/territories reported in the survey) reported expected dollar volume growth rates in excess of ten percent. college costs increased at a greater rate than grant dollar awards in over half the states. Fourteen states estimated no program growth (with four reporting losses) and another eight states estimated growth rates of less than five percent. The eight remaining states reported growth rates of between 5.0 and 9.9 percent. This is in sharp contrast to last year, when 47 states/territories reported at least some increase in program dollar volumes between 1983-84 and 1984-85 and 27 states reported increases in excess of ten percent. So in spite of the expected increase in aggregate award dollars from all states' programs, last year was a better year for more states than this one in terms of program dollar growth.

This year's expected program growth rates in ten states were quite noteworthy in that they exceeded 20 percent. Michigan's growth rate is highest, at 80.8 percent. Programs in New Mexico and Tennessee anticipate growth rates in excess of 40 percent and California, Delaware, Indiana, Oklahoma, and Washington expect to increase their award dollar volumes by more than 30 percent. Massachusetts and South Dakota expect 20 percent increases.

This year about 1,343,000 students are expected to receive aid from the need-based programs for undergraduates. This is a two percent increase over last year and an eleven percent increase over the 1,210,000 students who received aid in 1981-82. The growth rate in dollars awarded is much greater than the growth in annual recipients.

This year's average award will be approximately \$969, up by about ten percent over last year's \$881. In 1981-82 the average award was \$682. The four-year percentage increase in average awards was 42 percent, or slightly above the increase in costs paid by most recipients.

Graduate Need-Based Grant Aid

This year the 23 states that reported need-based programs for graduate/professional school students expect to increase their aggregate award dollars by 11.9 percent to \$19.5 million (see Table 3). This represents an increase of 14.7 percent since 1981-82's volume of \$17 million. The numbers of aid recipients in 1984-85 and 1985-86 are quite similar, at approximately 26,000, but this year's number represents an increase of about 1,000 more recipients since 1981-82

As with the undergraduate need-based programs, only a few states award the majority of dollars to graduate/professional school students. For example, only seven states will award more than \$1 million annually. They are, ranked by program dollar volumes: California, New York, Massachusetts, Michigan, Texas, Oklahoma, and North Carolina. Their expected dollar volume is \$16.7 million or 85 percent of the total for all 23 states. The remaining 16 states expect to award only \$2.8 million or about \$175,000 per state.

Less than half the states have need-based aid programs for graduate/professional school students and their growth rate in program dollars is much less than the rate of growth in awards to undergraduates. For example, the growth rate in aggregate award dollars in these 23 states is 14.7 percent since 1981-82 but need-based aid to undergraduates in these same states increased by 48.9 percent. It is quite clear that graduate/professional school students' access to need-based aid is much more restricted than undergraduates' access -- even in states with programs for post-baccalaureate students.

Non-Need-Based Undergraduate Programs

Table 4 shows that 28 states have grant programs that award aid to undergraduates without consideration of their financial needs. These programs can be grouped into three general categories: (1) "tuition equalization programs," designed to reduce the differences in tuition costs at public and private colleges; (2) "scholarship programs," designed to award meritorious students, generally for the purpose of enhancing the probability that the recipients will attend in-state institutions; and (3) "categorical aid programs," designed to encourage participation in particular programs of study, such as mathematics or science, or programs which aid dependents of special constituents, such as veterans or policemen.

In 1985-86, all these programs expect to award a total of \$127 million to about 213,000 students. This represents a 7.3 percent increase over last year's \$118.4 million awarded to 235,000 students. Since 1981-82, the year NASSGP first collected data on this type of aid, the dollar volume has grown by \$39.3 mil lion or about 44.8 percent.

In recent years there has been much debate on whether more aid should be non-need-based. Since 1981-82, non-need-based undergraduate aid in the 28 states with both need-based and non-need-based aid programs grew by \$308.2 million, or 46.7 percent, from \$660.5 million to \$968.7 million. In 1981-82, the ratio of need-based to non-need-based dollars was 7.53 to 1; the expected 1985-86 ratio is 7.63 to 1. Therefore, the aggregate dollar growth rates in the two types of programs in states with both types are quite similar. However, it should be noted that six of these states spend more on non-need-based grant aid than need-based grant aid. The six states are Alabama, Florida, Georgia, Idaho, North Carolina, and Virginia. All but Idaho spends more on non-need-based aid because of tuition equalization programs. Idaho spends slightly more on its scholarship program than its need-based-grant program \$541,000 as compared to \$509,000.

Seven states have tuition equalization programs. These states include Alabama, Florida, Georgia, Michigan, North Carolina, Ohio, and Virginia. For 1985-86, expenditures through these programs are estimated at \$71.9 million, or about 56.6 percent of all the non-need-based aid programs for undergraduates. Since 1981-82, aggregate dollars of aid through these types of programs have

grown by about 27.7 percent or \$15.6 million, from \$56.3 million to \$71.9 million. However, the growth in aggregate aid in tuition equalization grant programs was slowed by the fact that Michigan slashed its volume from \$14.5 million to just \$3 million between 1984-85 and 1985-86, diverting more funds to its need-based grant programs.

Fifteen states reported data for scholarship or merit-based grant programs that are generally available to talented students. (Some states' scholarship programs are directed toward students with special characteristics or who intend to study in a particular field.) These states include Arkansas, Colorado, Delaware, Florida, Georgia, Illinois, Louisiana, Maryland, Massachusetts, New Jersey, New York, Ohio, South Dakota, Virginia, and Washington. Their programs are expected to award \$35 million to recipients in 1985-86. This amount represents a 9.7 percent growth from last year's \$31.9 million. About 85,000 students are expected to receive awards in 1985-86 for an average award of slightly over \$400.

Non-Need-Based Graduate Programs

Table 5 shows that 20 states have non-need-based grant programs for graduates and/or professional school students. These programs are expected to award \$11.020 million to 4,100 students in 1985-86. This represents a 24 percent growth rate in aggregate dollar volume over last year's \$8.886 million awarded to 3,100 students. However, about 43 percent of the growth in aggregate dollars occurred in one program, New York's Empire State Scholarship for Training Teachers in Math and Science.

The NASSGP survey first collected data for non-need-based aid to graduate/professional school students for 1981-82. In that year \$3.223 million was awarded to about 2,000 students by programs in just ten states. Therefore, the number of programs and states with programs have grown significantly in these past few years. Still the total amount of aid represents only 0.7 percent of all state-supported grant aid.

Other Aid Programs Administered By NASSGP Agencies

Table 6 describes a variety of other non-grant aid programs administered by NASSGP member agencies. Over 100 programs were identified by 38 responding states. Most of these programs, 67 or 62 percent, were loan programs of one kind or another, often the Guaranteed Student Loan and PLUS/ALAS loan programs. Of the 52 NASSGP member agencies, 21 serve as guarantors for the federal GSL program in their states. Many states now have loan forgiveness programs of one kind or another. (See Section IV for additional details on these programs). Thirteen states reported administration of 14 work-study programs of one kind or another. The remaining programs were special scholarship programs, tuition remission programs, contractural programs, or categorical aid programs funded from non-state sources. The 38 states reporting programs indicated that state appropriations for all these agency-administered programs will exceed \$360 million in 1985-86.

Other State-Funded Aid Programs

Table 7 displays the state aid programs that 14 states reported were administered by other agencies in their states. Most of these programs were categorical aid programs designed to assist students in the health professions (seven programs) or to aid dependents of veterans (four programs). But two were

work-study programs (in Kansas and New York) and six programs (in Florida, Illinois, Maryland, Minnesota, North Dakota, and South Carolina) were especially designed to aid racial-ethnic minority group members. The 14 responding states indicated that state appropriations for these "other agency" programs will exceed \$32 million in 1985-86.

Merit-Based Grant Programs for Need Undergraduates

Sixteen states have need-based grant programs for undergraduates which require some measure of academic potential or merit as a condition of original eligibility. This year the 19 programs in these states expect to award \$244 million to 211,000 students (see Table 8). The average award through these programs is \$1,153.

Last year, 1984-85, these 19 programs awarded \$199 million to 206,000 students. So the annual aggregate growth rate in dollar volumes is 18.4 percent. However, nearly \$38 million of the \$44 million increase in volumes occurred in the programs of just two states, California and Michigan. The aggregate expected growth rate for all other states is only 10.9 percent, or about the rate of growth in need-based undergraduate programs in general.

Grant Programs For Use Only At Public Institutions

Ten states have need-based aid programs exclusively for undergraduates attending public institutions. Nine of these states also have one or more programs for students at non-public institutions. Only Wyoming restricts its awards to students at public institutions, because there are no non-public colleges in that state. These programs expect to award \$20.3 million to 50,000 students in 1985-86. Last year they awarded \$17.7 million to 50,000 students. This increase in award dollars to a similar number of recipients caused the average award to increase by about 13.1 percent, from \$357 to \$404 per year. It should be noted that the awards of one state (Wisconsin) account for over 60 percent of all the aid in this category.

Grant Programs For Use Only At Non-Public Institutions

Thirteen states have programs of need-based aid only for undergraduates who attend private institutions (see Table 10). These programs are expected to award \$127 million to nearly 89,000 student in 1985-86. Last year they awarded \$103 million to slightly over 84,000 students. Therefore, aggregate program dollar volume has increased by 23.3 percent. However, \$18.45 million or 77 percent of the \$24 million increase occurred in just one state, Michigan. In that state, funds were shifted from a non-need-based tuition equalization grant program to the need-based one to account for much of their program growth. The growth rate for aggregate award dollars in the other twelve states was only 3.2 percent, from \$89.3 million to \$92.2 million. Therefore, in general, the growth rate among the majority of grant programs exclusively for students at non-public institutions is lower than the rate for programs exclusively for students at public institutions. And the growth rate for the non-public programs is generally lower than the rate for all need-based programs.

Undergraduate Need-Based Aid By Institutional Types

Table 11 shows the percentage distribution of undergraduate need-based aid awards and dollars among in-state public and private institutions and out-of-state institutions for 94 programs. The respondents' estimates indicate that 57.1 percent of the award dollars will go to students attending in-state private

institutions. About 41.3 percent will go to students attending in-state public institutions and the remaining 1.5 percent will be received by students attending schools outside the boundaries of their home states.

The percentages are very similar to those reported in earlier years of the 1980s and there are no discernible "long-term" shifts in the percentages of aggregate aid dollars going to students at the different types of institutions. Neither are there significant changes in proportions of recipients attending the different types of institutions.

Although over half the aid is awarded to students at in-state private colleges, these students represent only 38 percent of the total recipients. This is because awards to private college students generally are greater because of their higher tuition costs. Although 47 programs expected to award at least one-third of their aid dollars to students at private colleges, only 36 expected at least one-third of their recipients to attend private colleges. Again, these proportions are similar to those appearing in earlier surveys.

Only 18 programs in 15 states indicated that awards would go to students to attend institutions outside their states. In all, these students represent 1.9 percent of all recipients and 1.5 percent of all dollars. Only five states' programs will award at least one-third of a program's dollars to students attending out-of-state institutions. They are: Delaware, 57.7 percent; Rhode Island, 47.9 percent; Maine, 43.0 percent; Alaska, 34.6 percent; and, the District of Columbia, 33.3 percent. This pattern follows the one observed in last year's survey.

SSIG Program Activities By States

Table 12 displays the State Student Incentive Grant Program activities by states and territories. The 50 states, the District of Columbia, and Puerto Rico reported SSIG program expenditures of \$75.9 million in 1984-85 and estimated expenditures of \$75.6 million for 1985-86.

The seven states reporting the largest dollar expenditures were: California, \$11.7 million; New York, \$6.5 million; Texas, \$4.2 million; Illinois, \$4.1 million; Pennsylvania, \$3.4 million; Michigan, \$3.1 million; and, Ohio, \$3.0 million. In all, these seven states accounted for 47 percent of all 1984-85 SSIG program expenditures.

In 1984-85, four states returned more than nominal (\$3,000 or more) amounts of their SSIG allotments to the federal program. Two states, Arizona and Louisiana, each returned more than \$100,000, Montana returned \$18,000 and North Carolina returned \$16,480. This pattern reverses a downward trend of earlier years. Last year only two states returned more than nominal sums but in 1981-82 and 1982-83 nine states returned more than \$5,000.

This year 12 states expect half their need-based award dollar volumes to come from SSIG allocations. Last year 14 states fit this situation. In 1985-86, 17 states expect their SSIG allocations to exceed one-third of their program expenditures. Last year 17 states also found themselves in similar circumstances.

This year the SSIG allocations are expected to represent about 5.7 percent of the need-based aid offered through SSIG-funded programs. Last year's percentage was only 6.2 percent.

TABLE 1

ESTIMATED TOTAL GRANT AID AWARDED BY STATE PROGRAMS, 1985-86, BY TYPES OF PROGRAMS

(AMOUNTS IN MILLIONS)

	Need-Based Undergrads	l Aid Grads	Non-Need-Ba Undergrads	sed Aid Grads	Other Aid*	Total Grants
						
Alabama	\$ 2.242	\$ 0.066	\$ 4.319	\$ 0.076		\$ 6.703
Alaska	(0.241)			(1.834)		(2.075)
Arizona	2.578	0.008				2.586
Arkansas	4.412		0.392			4.804

Figures in () are 1984-85 data.

^{*} Aid reported under this heading includes grant aid administered by other state agencies, tuition fee waiver programs administered by state and institutions, special programs for veterans, matching programs, etc.

^{**} Reported a grant program for graduate students but could not report dollars awarded.

Amounts are included in undergraduate figures for these states.

ω,	School of Arts									

^{*} No appropriation by state. Public colleges must set aside an amount equal to 11% of the year's tuition revenues for financial aid to needy students.

^{**} Reimbursement to schools for their share of funds expended in participation in federal work study program.

^{***} Certain need criteria are enforced. However, need is not defined the same as with Uniform Methodology.

Figures in () are estimated from 1984-85 data.

Note: SSIG allocations received by American Samoa, Guam, Trust Territory, and Virgin Islands not reported as they did not respond to the survey.

^{*} Percentage is greater than 50.0% because last year's total aid amount was used as estimate for 1984-85.

SECTION III PROGRAM CHARACTERISTICS

Applications and Awards

About 73 percent of the 166 programs for which most characteristics are available estimated the numbers of applications to be received in 1985-86. These 121 programs expect to process 2,833,761 applications and make over 1,313,512 awards (see Table 13). In the aggregate, about 46.4 percent of all applicants will receive awards. On the average, 58.1 percent of the programs' applicants will receive awards and the middle two-thirds of the programs will award aid to between 29 and 87 percent of their applicants. This means that roughly 16 percent will award aid to less than 29 percent of their applicants and another 16 percent will aid more than 87 percent. These percentages and ranges are all very similar to ones reported in the 1984-85 survey.

On the average, one-fifth of the denied or rejected applicants will fail to receive awards because they were judged to have no financial need by the programs. This proportion is similar to last year's 19.8 percent.

On the average, slightly over one-fifth of the denied applicants will be rejected because their programs lack sufficient funds to offer them awards. Those students are eligible but no funds are available to offer them awards. In terms of numbers, over 286,000 students will be denied aid for lack of program funds. Insufficient funding is a problem for 51 percent of the programs.

Table 14 displays the responses of 29 states which offered comments believed to help readers better understand their 1985-86 program circumstances.

Years Of Program Initiation

Of the 167 programs that indicated when they first became operational, only 40 or 24.0 percent were implemented prior to 1970 (see Table 15). Another 20 or 12.0 percent were implemented between 1970 and 1972. The most programs, 60 or 35.9 percent, started between 1973 and 1978. Between 1979 and 1981, 16 or 9.6 percent of the programs became operational. Since 1981, 31 programs were implemented, with eight beginning in 1985. Over half the programs were implemented after 1974, so the growth in numbers of state-funded grant programs is a quite recent phenomenon.

Between 1982 and 1985, 31 new programs were implemented. All but seven of these programs are non-need-based ones. Alabama's Chiropractic Scholarships, Florida's Seminole/Miccosukee Indian Scholarship, Massachusetts' Graduate Student Grant Program and Teacher Incentive Program, New York's Aid for Part-Time Study, South Dakota's Educational Excellence Scholarship, and Vermont's Non-Degree Student Grant Program are need-based.

The New York, Massachusetts, and South Dakota programs are for undergraduate students. The Alabama and one Massachusetts programs are for graduate students. The Florida and Vermont programs are for both undergrads and graduate students. The estimated award volume for these seven programs is \$13.2 million with \$11 million in the New York program and \$1.7 million in the Massachusetts program. The expected 1985-86 award volume for all 31 newer programs is

\$36.7 million, so $36 \text{ percent of the } \underline{\text{funds}}$ for these new programs will be awarded on the basis of need even though only 23 percent of the programs are need-based.

Eight of the new programs are non-need-based merit scholarship programs for undergraduates in Arkansas, Delaware, Maine, Massachusetts, New Jersey, Indiana, Virginia, and South Dakota. These eight programs expect to award about \$3.4 million in 1985-86.

Three programs are non-need-based grants for students who have served in the armed forces. They are Alabama's National Guard Education Assistance Program for undergraduate and graduate students, New Jersey's Vietnam Veterans Tuition Aid Program for undergraduates only, and New York's Vietnam Veterans Tuition Aid Program for undergraduates only. The first expects to award \$216,000 this year; the latter two expect to award \$1 million and \$3 million respectively.

Ten programs are designed to provide non-need-based aid to prospective school teachers. They include Alabama's Emergency Secondary Education Scholar-ship Program for graduate students and undergraduates (which expects to award \$1,079,000 this year); Florida's Critical Teacher Shortage Reimbursement Program for graduates and undergraduates (\$161,000 combined); Indiana's Loan Forgiveness (\$150,000) and Teacher Retraining (\$100,000) for Math/Science Teacher programs, both for graduates; Iowa's Science and Math Grants for undergraduates (\$962,000); New York's Empire State Scholarship for training teachers for graduates and undergraduates (\$3 million combined); Oklahoma's Future Teacher Scholarship Program for both graduates and undergraduates (\$184,000 combined); Maryland's Teacher Education Critical Shortage (\$80,000) and Teacher Education Distinguished Scholar programs (\$20,000), both for undergraduates; and, Tennessee's Teacher Loan/Scholarship program which expects to award \$203,000 to undergraduate and \$39,000 to graduate students. These ten programs for prospective teachers are expected to award nearly \$6 million this year.

Connecticut's non-need-based scholarship program for graduate students in "high tech" programs expects to award \$100,000 in 1985-86. The remaining program, Ohio's Student Choice Grants Program, is a non-need-based program for undergraduates which expects to award \$9.8 million this year.

Average Program Awards

Average annual program awards range from a low of \$147 for Vermont's Non-Degree Student Grant Program to \$12,038 for Utah's Western Interstate Commission for Higher Education Program (see Table 15). Of the 156 programs indicating an average award, 35.9 percent will award an average award in excess of \$1,000. Last year only 33.1 percent had programs with average amounts at this level. In 1983 only 27.4 had these larger average awards. Of the 36 programs which expect average awards of \$1,500 or more, 17 are for undergraduates, 13 are for graduate/professional school students, and six are for both.

Application Procedures

Because they are need-based programs, most programs use some system for assessing their applicants' financial needs. The most frequently used system is the one provided by the College Scholarship Service (CSS). It is used exclusively by 33 percent (34 of 103) of the programs and used in combination with other systems by another 44.7 percent (46 of 103) (see Table 16).

The American College Testing Program (ACT) system is used exclusively by 6.8 percent (7 of 103) of the programs and in combination with other systems by another 40.8 percent (42 of 103). Over 84 percent of the programs (87 of 103) use the ACT and/or CSS system at least to some extent. Seven programs use the Pell Grant system exclusively and another 11 use this system in combination with other systems, usually the ACT or CSS ones. Five programs reported using their own agency-designed system exclusively and one uses this system in combination with ACT and CSS. Seven programs reported using other systems of need-analysis exclusively or in combination with another method such as the SAFE System or GAPSFAS. Generally most programs use systems which employ the Uniform Methodology for need analysis.

About 47 percent of the need-based programs for undergraduates (42 of 90) require applicants to file Pell Grant program applications to establish eligibility for an award (see Table 16). The need-based undergraduate programs which require a Pell Grant application use the data in a variety of ways. For example 64 percent (27 of 42) subtract Pell Grant awards from need before calculating the award. While they do not require a Pell Grant application to establish eligibility, 27 percent (13 of 48) subtract Pell Grant awards from need before calculating the award. Whether or not the need-based undergraduate programs require a Pell application, 15 programs use information from the Pell application in other ways.

About 34 percent (58 of 169) of the programs use some measure of merit to establish initial student eligibility for an award (see Table 16). ACT and/or SAT test scores are used by 57 percent of the merit-based programs (33 of 58). Over 53 percent use college grades and over 55 percent use high school grades and/or class rank to establish eligibility. Most programs require combinations of grades and test scores as measures of merit. Only eight programs require test scores alone; only 11 programs use high school and/or college grades without benefit of test scores.

The need concept most frequently used by program respondents is "relative need," defined as that amount which varies by institutional costs as well as applicant ability to pay. Seventy-seven of the 102 programs listed in Table 16 as using some type of need concept said they use the "relative need" concept. Another 17 said they use the "absolute need" concept, which means that students are eligible for some fixed amount, regardless of their educational costs.

Independent Student Criteria

Of the 131 programs that said they employed "independent student" criteria in their programs, 61.1 percent or 80 used the definition currently employed by the federal Title IV aid programs. Most of the other states use modifications of the federal definitions which make their criteria more stringent. For example, California and Washington ask students to demonstrate independent status for three years prior to the year of the award. New York, Rhode Island, and Vermont require two prior years rather than one prior year of independence. In New York and Rhode Island, students under 22 years of age will not be considered independent in the absence of extraordinary circumstances. Ohio applies the three-part federal definition to the prior, the current or award year, and the following year.

Other definitions and criteria are employed. For independent status Pennsylvania's aid applicants must be Veterans, have been out of high school for six years or longer, or demonstrate independence through non-support from parents and an "available resource" test. New Jersey's applicants must demonstrate the availability of \$1,400 of base-year resources in addition to proving they did not live with parents for more than six weeks and were not claimed as dependents by their parents.

Program Eligible Institutions

Of the 163 program respondents that identified the types of institutions at which their program awards could be used, 77 said that awards could be used at public and private, two-year and four-year colleges and at least one other type of postsecondary institution, such as public or private nursing or vocational technical schools (see Table 17). So nearly half the programs are truly "comprehensive" in that they serve students at the majority of institutional types.

Over 17 percent (29 of 163) of the programs served just students at four-year colleges. Most of these programs aided undergraduate student types (12 undergrad, seven grad, and ten both). Fifteen of the 29 served students at both public and private, 12 served only students at public, and two served only students at private four-year colleges. Another 20.2 percent (33 of 163) served only students at four-year and two-year colleges, excluding other types of institutions. Sixteen of these programs were for both public and private colleges, eleven were for only private colleges, and six were for only public colleges. Thirty-four of the total responding programs served students at all institutional types. One served students at all institutions except two-year public and one served students at all except two-year privates.

Here is the breakdown of the numbers of programs and states with programs serving students at each institutional type: Four-year public colleges, 143 programs in 51 states; four-year private colleges, 138 programs in 51 states; two-year public colleges, 110 programs in 50 states; two-year private colleges, 105 programs in 46 states; public vocational-technical, 68 programs in 38 states; private vocational-technical, 59 programs in 36 states; public nursing schools, 68 programs in 36 states; and, private nursing schools, 67 programs in 35 states.

Table 18 shows that 22 states have 34 need-based grant programs which serve part-time undergraduate students. Two states, Oregon and Texas, reported grant programs which served non-residents of their respective states. Most states' programs serve permanent residents and refugees as well as United States citizens. Only sixteen states reported having no programs to serve refugees. Twelve states reported having programs which serve their residents who enroll in institutions in other states.

Published Application Deadline Dates

Table 19 shows that the state-supported grant and scholarship programs have application deadline dates which range from January of the year preceding the academic year (January, 1985 for the 1985-86 academic year) to May of the academic year for which the award will be used. About 40 percent of the programs (51 of 126) have no firm application deadline dates, have variable dates for each term of the award, or rely on the applicants' institutions to specify the deadline dates. Another 42 percent (53 of 126) require applicants to file before May 1, 1985 for an award for the 1985-86 academic year. Another 16 percent (20 of 126) have application deadline dates that fall between the first of

May and the end of August, 1985, for the 1985-86 academic year. The remaining two percent (2 of 126) will permit students to file applications for awards during the academic year for which the aid will be used.

It should be noted that several programs have different application deadline dates for different types of students, for example, "new" and "renewal" applicants, students attending different types of institutions, or students beginning their academic programs at different times during the academic year. A review to the responses to this survey item reveals a very wide diversity of deadline dates for different programs offered by individual states. The policies for setting deadline dates appear to serve a variety of purposes and students and program needs.

COMMENTS TO AID SURVEY READERS TO BETTER UNDERSTAND AGENCY POSITION

STATE	RESPONSE
Alabama	This is the first year for the State of Alabama Chiopractic Scholarships and only the second year of operation for the Emergency Secondary Education Scholarship Program (Math - Science Loan Forgiveness Program) and the Alabama National Guard Educational Assistance Program.
Arizona	SSIG is the only state grant aid program in Arizona. We use the decentralized system where awards are recommended by the school financial aid office. The Legislature provides only 20% of the match. The other 80% comes from the schools.
California	The California legislature increased both the number of awards and award maximums for the 1985-86 academic year. Some new awards are reserved for community college transfer recipients.
Colorado	Administration of Colorado Student Aid Programs is decentralized. Funds are appropriated to the Colorado Commission of Higher Education. The Commission allocates the funds among eligible institutions within the state. Awards to students are made according to guidelines established by the Commission.
Connecticut	Student financial aid administration is not an area that dominates the agenda of the Connecticut Board of Governors. It is seen as just one of a number of higher education responsibilities delegated to the Connecticut Department of Higher Education.
Georgia	A new program, the Governor's Scholarship Program, was initiated. This is a non-need academic scholarship.
Idaho	Idaho provides two types of financial aid. SSIG - providing matching funds and funding a State Honor Scholarship of 25 renewable scholarships per year.
Illinois	Continued state funding of the Monetary Award Program at 60 percent of the need demonstrated by applicants results in rationing of eligibility and award denial to about 40,000 needy applicants per year.
Indiana	A new simplified award calculation was implemented in 1985-86 whereby tuition and fees minus parental contribution (or Pell Index for independent students) equaled Potential Award. Due to the total need being more than available dollars, an adjustment factor was applied.
Iowa	The Iowa College Aid Commission, in addition to administering the state-appropriated funds for grants and scholarships, is the state designated guarantor for the Guaranteed Student Loan Program.
Kansas	The Kansas Board of Regents governs the state's six public tax-supported universities and one public technical institution. The student assistance section of the Board of Regents has responsibilities to both public and private colleges due to the administration of the Kansas Tuition Grant Program.

STATE	RESPONSE
DIVID	TONO TOUR

Kentucky	KHEAA's efforts for 1985-86 are directed toward refining
Renducky	services for students. New programs are being planned for
	implementation in 1986-87.
	Impromentation in 1900 07.
	Kentucky Distinguished Scholarship Award Program
	The Kentucky Distinguished Scholarship Award Program will
	recognize and reward academic excellence among Kentucky's
	talented students by providing financial assistance to
	encourage attendance at Kentucky's colleges and universities.
	Awards will be offered to students who demonstrate the
	highest capabilities for successful college study.
	Awards will be based on both merit and need. One hundred
	scholars will be granted a Recognition Award of \$500 each.
	Those scholars who can demonstrate need will also receive
	a Monetary Award sufficient to eliminate the financial
	barriers for attending the eligible institution of their
	choice. Monetary Awards will be offered to the scholars
	for the duration of their undergraduate program to the
	extent funds are available.
	Teacher Incentive Loan Program
	The Teacher Incentive Loan Program, a newly legislated
	program, will encourage academically outstanding students
	to enter the teaching profession in Kentucky. Eligible
	students will receive loans which will be forgiven - one
	annual loan for each year of teaching.
Massachusetts	For the third consecutive year, the Scholarship Office has
	received a significant increase in funds. During fiscal year
	1986, the increase will provide qualitative and quantitative
	increases in the centrally administered programs and
	continuation of the six new programs. All new programs
	will be critically evaluated for effectiveness during the
X	year.
Minnesota	MHECB has established a new state loan program called the Student Educational Loan Fund (SELF). A student can borrow
•,	up to \$4,000 each year for a maximum of \$16,000. The
	Part-Time Grant Program has been expanded from \$300,000 to
	\$1,000,000 in 1985-86. MHECB has implemented a state policy
	in which students under 22 are considered to be dependent
	unless they are an orphan, ward of the state, veteran,
	married, divorced, or have a child.
Missouri	1. Fund renewal students first.
MISSOULI	2. Fund non-renewal students based on the highest need.
	Only able to fund approximately 30% of all eligible students
	based on current funding levels.
Montana	SSIG - Campuses recommended student awards to state agency
	and award funds subject to agency approval.
New Jersey	During the past year the state's economic condition enabled
	the funding of special benefit programs for veterans, POW/MIA
	families, and families of state police killed in the
	performance of their duties. The Department also increased
	the value of award to students attending New Jersey
	the value of award to students accending new bersey

STATE

RESPONSE

New York	No significant changes were enacted for the state's major
	needs-based grant program (the Tuition Assistance Program).
	Two new programs to increase the number of members of under-
	represented minorities in the professions were enacted. A
	now mondabased applicable in the professions were enacted. A
	new non-need-based scholarship program was established for
	Health Care Professionals which carries an obligation to work
	in state facilities upon completion of professional training.
North Carolina	The agency remains committed to providing full access to a
	postsecondary educational opportunity for all North Carolina
	citizens, relying as little as possible on loans to fulfill
	that promise.
Pennsylvania	
Pellisylvalita	Agency experienced its first decrease in number of applicants
	for State Grants. Legislation expected to pass to allow an
	increase in the \$1,500 maximum grant amount and funding
	level to permit a \$1,650 maximum. A 6% increase in funding
	permitted modest increases in grant amounts.
Rhode Island	The money is appropriated by the General Assembly to the
idiode Ibidiid	
	Scholarship and Grant program. Scholarship/Grant Division
	distributes aid to students and makes institutional
	allocations to Work Opportunity Program. One of the few
	portable programs in this country.
South Carolina	18 independent colleges in the program. Maximum grant
	allowed at each college is based on tuition sensitive formula
	developed by South Carolina Tuition Grants Committee.
South Dakota	Awards are based on financial need and federal requirements.
	Allowable unmet need, as determined by the Pell Grant
	Application, is the main basis of eligibility. Tuition
	equalization grants are for students attending private
ì	institutions. Educational Excellence is for students in
	teacher education programs.
Tennessee	The Tennessee Student Assistance Award (TSAA) is a grant
	program administered by the Tennessee Student Assistance
	Corporation (TSAC). The corporation has responsibility for
	the Guaranteed Student Loan Program and the Teacher/Loan
	Scholarship Program in addition to the grant (TSAA) program.
	State grants (TSAA) are based on need and can be given only
	to Tennessee residents to attend in-state schools.
Texas	Tuition bill passed in Spring, 1985 tripled tuition, but
	resident tuition is still the lowest in the country. Same
	bill introduced installment payments, on-campus emergency
	loans, and increased funding for on-campus grant program.
	Many adjustments are being made.
Utah	The Utah System of Higher Education has a new Commissioner
Ctan	
	and six newly appointed regents who replace six of a 15
	Regent Board.
Virginia	Concern with increasing dependence or student loans as a
	financing mechanism.
Washington	Washington's student financial aid programs are administered
	within the state's higher education coordinating board, not
	as a separate student aid commission.
Total and the Transaction of the	For the fourth consecutive year, funding limitations
West Virginia

FOOTNOTES FOR TABLE 16

Need Analysis	_	Comments	(*)	and	Other	Criteria

Arizona	
	CAPE Cyctom
Incentive Grant Program District of Columbia	SAFE System
Incentive Grants	GAPSFAS
Maryland	
General State Scholarship	A*, C* - CSS System is first choice and ACT
Senatorial Grants	system is used as substitute.
Children of Deceased Firemen	
Nebraska	
Incentive Grants	Institutional perogative.
New Jersey	
Tuition Aid Grants	C* - With New Jersey modifications.
New York	
Aid for Part-Time Study	Educational cost minus other grant aid.
	Schools select recipients.
North Carolina	
Board of Governors Medical Scholarships	GAPSFAS
Board of Governors Dental Scholarships	GAPSFAS
Ohio	
Instructional Grants	Awards based on Tables of Grants provided in
	statute. Tables are income and dependent
	children driven.
Oklahoma	
Tuition Aid Grant	S* - Data is collected by ACT and CSS, then
-	tested by specific state need analysis system.
	· · · · · · · · · · · · · · · · · · ·

Alabama	
Emergency Secondary Education	Average in area of certification.
Scholarship Program	
Arkansas	
Governor's Scholarship Program	School and community leadership.
California	
Cal Grant A	S* - Only where GPA unavailable or in cases
	of re-entry students with no grade in last
	12 years.
Cal Grant B	HS* - Part of selection criteria, after need
	is established.
Cal Grant C	HS*, CG* - After need has been established,
	GPA is used along with other information
	(such as vocational choice, work experience,
	teacher recommendations, etc.), each with a
	range of points possible, to determine a
	composite score by which recipients are
	selected.
Graduate Fellowship	Graduate Test Scores: GRE, LSAT, MCAT, GMAT,
<u>-</u>	DAT.
Colorado	
Undergraduate Merit Awards	Institutions develop their expenditure plans
=	

Merit Criteria - Comments (*) and Other Criteria

Graduate Fellowship

and definitions of merit.

Connecticut	
High Technology Graduate Scholarships	Graduate faculty recommendations, GRES.
Delaware	Graduate faculty recommendations, GRES.
Diamond State Scholars	Extra curricular activities, work experiences, other achievements, essay.
Florida	
Critical Teacher Shortage Tuition	Course grades for reimbursement must be "B"
Reimbursement Program	or better.
Louisiana	
Incentive Grant	GED where applicable.
Maine	old wildle applicable.
Blaine House Scholars Program	Academic awards.
Maryland	110adoni20 directas.
Teacher Ed Critical Shortage	Subject area which will be taught and recommendation.
General State Scholarships	S* - For half of need-based awards.
Senatorial Grants	S*, HS*, CG* - Decision up to local Senator.
Massachusetts	
Teacher Incentive	Determined in conjunction with financial need
	at participating campuses.
Michigan	The Francisco Contract of the Francisco Contract On Cont
Tuition Grants	Satisfactory academic progress.
Differential Grants	Satisfactory academic progress.
New Jersey	buttered progress.
Garden State Graduate Fellowship	Combination of undergraduate GPA, GRE scores,
ouradi. Board draward refronting	and academic appraisals.
New York	and academic appraisals.
Empire State Scholarships for	Academic record and references are reviewed
Training Teachers	
North Carolina	by an independent panel.
	MCAM ggoves wegownendstiens actionts
Board of Governors Medical Scholarships	MCAT scores, recommendations, estimated
	potential to serve State of N.C. through active
	medical practice, member of a minority race.
	Selected by a special committee composed of
	practicing members of the medical profession.
Board of Governors Dental Scholarships	DAT scores, interviews, faculty
	recommendations, potential to serve the state
	through dental practice and representation as
	a member of a minority race. Selected by a
	special committee composed of practicing
	members of the profession.
South Dakota	
Superior Scholar Scholarships	National Merit Scholarship Semi-finalist.
Virginia	
Virginia Scholars Program	Strength of preparatory programs (high school
	or two-year college), demonstrated leadership
	and other personal achievements.
Washington	
Paul Fowler Academic Excellence	Applicants must be Washington scholars.
Scholarship	
Scholars Program	Honors, awards, leadership, and community
	service.
West Virginia	
Higher Education Grant Program	Must complete the equivalent of 24 semester
-	hours and maintain the minimum grade point
	average of 2.0.

West Vir	ginia		
Higher	Education	Grant	Program

R* - Students are ranked according to the Family Contribution in ascending order within the two major priority groups (renewals and other). Need is determined by subtracting the family contribution from the educational cost (Budget). A minimum of \$500 in need is required. Awards are restricted to the payment of tuition and fees.

Independent Student Criteri	a - Comments (*) and Other Criteria
California	
Cal Grant A	Prior three years plus current year
Cal Grant B	independent of parents.
Cal Grant C	-
Bilingual Teacher Grant	
Law Enforcement Personnel	
Graduate Fellowship	
Massachusetts	
Teacher Incentive	Determined by participating campuses.
Graduate Student Grants	Determined by participating colleges and universities.
Fire/Police/Corrections Program	Determined by participating colleges and universities.
Minnesota	
Scholarship and Grant Program	Federal criteria plus anyone under 22 by October 1 is dependent unless they are married, widowed, divorced, a veteran, have a child, are a refugee, ward of the state or an orphan.
New Jersey	un orphun.
Tuition Aid Grants Educational Opportunity Fund-Undergrad.	\$1,400 of base-year resources; not considered as tax exemption on parents' return; did not live with parents for more than six weeks.
Educational Opportunity Fund-Graduate	F* - With New Jersey modifications.
New Mexico	in the belocy modifications.
Student Incentive Grant	Ask for 1040 Form from parents and CSS or ACT.
New York	TIBER 101 1040 TOTAL THOM PATERES AND CSS OF ACT.
Tuition Assistance Program	Like federal criteria, except tax dependency, only asked for two previous years and under 22 years of age student must prove extraordinary circumstances.
Aid for Part-Time Study	Tax dependency in the prior tax year only.
Ohio	
Instructional Grants	Must not have been claimed as tax exemption, resided with, received any financial support from, parents in previous year, current year or following year.
Pennsylvania	
State Grant Program	Veteran, or out of high school six years or more, or demonstration of independence through nonsupport from parents and available resource test.

Rhode Island Scholarship and Grant Program	Current year plus two prior years of independence; no one under age 22 considered independent unless parents are deceased or declared incompetent; student is married or has dependents; student is a ward of the state. Once dependent, student remains dependent until completion of program. Exceptions may be made at discretion of the authority.
Vermont Incentive Grant Part-Time Student Grant Non-Degree Student Grant Program	Federal definition plus one additional year.
Washington Need Grant Program	Must prove independent student status for three years prior to award year.

Graduate Grant	
Undergraduate Merit Awards	
National Guard Tuition Assistance	No deadline.
Veterans Tuition Assistance	Prior to end of term for which assistance
	is sought.
Dependents Tuition Assistance	No deadline.
Connecticut	February 15 - Initial Applicants;
Scholastic Achievement Grants	April 15 - Renewal Applicants
High Technology Graduate Scholarship	February 1
Delaware	
Postsecondary Scholarship Fund	April 30
Educational Benefits for Children	
of Deceased Veterans and Others	None
Optometric Institutional Aid	None
Diamond State Scholars	August 6
District of Columbia	
Incentive Grants	June 28, 1985
Florida	Processed by CSS/ACT by April 15
Student Assistance Grant	preceding the academic year.
Critical Teacher Shortage Tuition	First term, January 31; Second term,
Reimbursement Program	May 31; Third term, July 15; Summer term,
•	September 16.
Exceptional Child Education	
Scholarship	None

State/Program	Response
Georgia	
Student Incentive Grants	June 1
Illinois	
Monetary Award Program	June 1 for renewals for full-year eligibility; October 1 for initials for
Monecary Award Program	
•	full-year eligibility; final for part
Indiana	year same as Pell.
	Manach 1
Higher Education Award Loan Forgiveness for	March 1
Math/Science Teachers	Septebmer 15
Teacher Retraining for	
Math/Science Teachers	August 1, November 29, April 1
Iowa	
Scholarship Program	March 1 (first priority); June 1 (second
Tuition Grant Program	priority)
Vo-Tech Tuition Grants	
Science and Math Grant	December 1
Kansas	
State Scholarships	April 21
Tuition Grants	April 21
Kentucky	
Student Incentive Grants	No deadline. April 1 is priority filing
Tuition Grant Program	date.
Louisiana	
Incentive Grants	November 1
T. H. Harris Scholarships	February 1 for fall semesters;
	December 31 for spring semesters
Rockefeller Scholarships	June 1 for fall semesters; December 31
	for spring semesters
Maine	
Incentive Grant Program	Prior to May 1
Blaine House Scholar Program	February 15
Maryland	
General State Scholarships	March 1 of academic year aid is sought.
Senatorial Grants	March 1 of year aid is sought.
Proprietary School Grants	Apply for Pell, then perhaps one month
riopricedry benedications	before award decision get nominated by
	the school.
House of Delegate Grants	None, but urge direct contact with the
house of Delegate Grants	
	delegate and certainly by May of year of
Hara Carabas Greents	aid.
War Orphan Grants	May of year aid is sought but deadline
	not rigid.
Professional Scholarships	March 1 of year aid is sought.
Family Practice - Medicine	March 1 of year prior to aid school year but not rigid.
Children of Deceased Firemen	March 1 of year aid is sought.
Distinguished Scholar	Enter process at end of junior year of
-	high school.
Graduate Nursing	March 1 of year aid is sought.
Children of POW Grants	At least 2-3 months prior to start of
	payment period.
	r T

State/Program	Response
Reimbursement of Firemen	Payments made one year after completion of academic year, so one month lead time required at least.
Teacher Education - Critical	July for 1985-86 grants. Earlier date for
Shortage	1986-87 grants.
Teacher Education - Distinguished	Spring for coming academic year.
Scholar	spring for coming academic fear.
Massachusetts	
General Scholarships	March 1
Christian Herter Program	February 8
Teacher Incentive	Process conducted on campuses.
Commonwealth Scholars	Process conducted at Massachusetts high
COMMON COLLEGE DONOLARS	schools. Materials submitted to the
•	Board of Regents in February.
Medical/Dental/Veterinarian	
Scholarships	March 1
Graduate Student Grant Program	Determined by colleges.
Honor Scholarships	Last SAT test date in January.
Fire/Police/Corrections Program	Determined by colleges.
War Orphans Program	Open for two previous years.
Michigan	February 15 - Freshman
Competitive Scholarship	March 15 - Upperclass
Tuition Grant	February 15 - Freshman
iurcion Granc	March 15 - Upperclass
Differential Grant	Varies each semester/term.
Minnesota	varies each semester/term.
Scholarship and Grant Program	May 31, 1986
Mississippi	ray 31, 1300
Student Incentive Grants	None
Missouri	Notic
Student Grant Program	April 30
Nebraska	APITI 30
Incentive Grant Program	Established at campus level.
New Hampshire	Escapitanca ac campas icver.
Incentive Grants	May 1 (preceeding fall term)
Nursing Education Grants	June 1 - fall term, January 5 - spring,
nursing Education Granes	May - summer
War Orphans Scholarships	None
New Jersey	October 1, 1985 for entire academic year;
Tuition Aid Grant	February 15, 1986 for spring term only.
Educational Opportunity Fund	October 1, 1985 for entire academic year;
Educational Opportunity Fund	March 1, 1986 for spring term only.
Garden State Scholarships	October 1, 1985 for entire year grants;
Garden State Scholarships	February 15, 1986 for spring term only.
Public Tuition Benefits	March 1, 1986
MIA/POW Tuition Grants	March 1, 1986
	October 1, 1984 for secondary schools to
Distinguished Scholars Program	submit selection forms for 1985-86.
Wickness Water	Submit Selection forms for 1905-00.
Vietnam Veterans Tuition	March 1 1006
Aid Program	March 1, 1986
Veterans Tuition Credit Program	March 1, 1986
Garden State Graduate Fellowship	March 1, 1986

SECTION IV POLICY ISSUES AND CONCERNS

This section of the survey report describes responses to a variety of questions about policy issues and concerns and describes planned or potential changes in state-supported aid programs.

Significant Changes Planned For Programs In 1986-87

Table 20 displays the responses of 17 states who identified significant planned changes for their 1986-87 student aid programs. Five states plan administrative changes to improve their aid delivery systems. Indiana plans to revise its aid application; Massachusetts will enhance its scholarship and delivery system; Missouri plans to implement new software for processing applications; New Jersey will utilize new computer technology to improve the flow of data among lenders, institutions, and their programs; and, Tennessee will automate its grant program through on-line computer operations.

Arizona, California, and Kentucky expect to increase significantly their grant program appropriations. The latter two states plan to revise their program eligibility criteria to flow more money to more needy students.

Iowa plans to stiffen its eligibility requirements for receipt of aid through its Science and Mathematics Grant program and Connecticut plans to liberalize eligibility requirements for its Achievement Grant program. Minnesota will extend program eligibility to part-time student applicants to its Scholarship and Grant program and Oregon will permit its resident recipients to use awards to attend colleges in Washington. Alabama has plans to implement a need-based Merit Scholarship program and the District of Columbia will develop a work-study program if SSIG funds can be used to support one.

New Financial Aid Programs To Be Implemented In 1986-87 Or 1987-88

Four states (Kansas, Kentucky, New Hampshire, and Tennessee) plan to implement merit-based scholarship programs during the next two years. Another four states (Michigan, New Jersey, Utah, and Virginia) plan to implement state-supported work-study programs. Arizona and the District of Columbia said they might develop work-study programs if SSIG funds can be used to support them.

Massachusetts and Vermont plan to extend grant aid eligibility to two new types of students, respectively, part-time students and students enrolled in non-degree programs. Pennsylvania hopes to implement a new grant program specifically for part-time students. Rhode Island will implement a need-based grant program for incarcerated students. Wisconsin will establish a Minority Student Grant program for students enrolled in private, non-profit institutions in that state. Michigan plans to implement an Independent Student Grant program of awards for non-traditional students.

Five states (Florida, Iowa, Kentucky, Missouri, and West Virginia) plan to implement loan forgiveness programs of one kind or another for teachers and students who will teach in "critical shortage" areas in these states. Table 21 displays more detail on responses to this question.

Most Important Policy Issues Facing Agencies This Year

The major policy issues facing state programs this year often reflect perennial issues faced by aid programs. For example, in responding to this survey question 13 states noted concern for increased funding of current programs and two others noted concern for replacing the potential loss of SSIG funds if that federal program is denied funding. Other states noted concerns about extending program eligibility to new groups of students. Arkansas, Ohio, Pennsylvania, and Virginia noted concerns about providing aid to less-than-full-time students and New York is facing modifications to its new program for part-timers. Tennessee is handling issues of increased grant awards to private college students and providing new aid awards to students at proprietary schools. Massachusetts and New Jersey are studying potential revisions to their programs' definitions of "independent students."

Four states (Iowa, North Carolina, Virginia, and Pennsylvania) mentioned concerns for increasing student dependence on loan aid and Colorado expressed concern that increasing tuition costs are threatening access to postsecondary education. Connecticut noted concern about the willingness of its legislature to create new programs that appeal to specific categories of students and constituencies rather than significantly increasing funding for existing need-based programs.

Florida and Oregon are each concerned about expanding their states' aid delivery systems through new data processing systems. Colorado is concerned about developing a comprehensive, statewide "unit record" reporting system to collect data on all aid received by students in that state. Table 22 provides more detail on state agency concerns.

SSIG Funding of State Work-Study Programs

During the past year several individuals and associations suggested that the federal State Student Incentive Grant (SSIG) program should be modified to enable states to use some or all their program allocations to help fund workstudy programs. The survey asked if states would use some or all their SSIG funds to support work-study programs under two conditions: (1) if the allocation was increased and (2) if the allocation was not increased. Table 23 displays the detail of responses. They are summarized here.

Of the 41 states that responded to this question, 31 said they would use SSIG allocations, under some conditions, to fund work-study programs. Sixteen of those states already have existing work-study programs of one kind or another and 15 would implement new programs if SSIG funds were available to help them do so. Nine of these 15 states would use SSIG funds for new work-study programs regardless of whether additional allocations were made but six states said they would develop new programs only if SSIG allocations were increased.

Thus it appears that merely changing the SSIG legislation would provide enough incentive to increase the number of state-supported work-study programs by 56 percent and adding additional dollars would provide incentive to nearly double the number of state-supported work-study programs.

Only three states (Massachusetts, Utah, and Washington) said they definitely would use all their SSIG allocations to fund work-study programs, even if the allocations were not increased. Each of these states already has an operational work-study program of some kind. On the other hand, ten states (two

with existing programs) said they would use none of their SSIG funds for workstudy programs, regardless of whether the funding levels were increased or not.

Responses To Total Loss of SSIG Funds

While some policymakers have suggested that SSIG program funds be utilized for work-study programs, others have recommended that the program no longer receive funding. The survey asked the agencies how they might react if funds were no longer available through the SSIG program.

Of the 41 respondents, 56 percent or 23 states said their grant programs would make fewer awards or smaller awards to recipients if their SSIG allocations were withdrawn.

Nine states said they were likely to lose their program funding entirely if SSIG funds were lost. The nine states are: Alabama, Arizona, District of Columbia, Idaho, Louisiana, Maine, Missouri, Montana, and North Carolina. The SSIG allocations in all but two of these states, Maine and North Carolina, represent half their aid program dollars. Therefore, it is understandable that loss of SSIG allocations would be very harmful to their programs.

Another nine states said that their legislatures were likely to make up for at least part of the losses of SSIG funds if the allocations were reduced or eliminated. These nine states are: Arkansas, Massachusetts, Minnesota, New Jersey, New York, North Dakota, Ohio, South Dakota, and Tennessee. Only four of these states' allocations represent more than ten percent of their 1985-86 need-based aid program dollars. The four states are: Arkansas, 11 percent; North Dakota, 25 percent; South Dakota, 34 percent; and Tennessee, 10.2 percent. Table 24 provides the detailed responses.

Loan Forgiveness Programs

The 1980s saw states develop several new financial aid programs whose basic policy is rooted in provisions of the early federal National Defense Student Loan (NDSL) program which enabled borrowers to obtain forgiveness of portions of their loan indebtedness in exchange for certain kinds of public service.

These new state-supported "loan forgiveness" or "scholarship-loan" programs are intended to provide students with incentives to follow careers of certain kinds and/or in certain areas of geographic or manpower needs. The intended incentives are designed to work in three general ways. One, students are given a grant if they intend to pursue some course of study leading to service in some specific career. If they do not obtain employment in that career for some specific length of time they must repay their grants in full or in part. The term "scholarship-loan" is often used to describe these programs. Two, students who graduate with loan indebtedness and agree to work in some specified career have portions or all of their loan debts "forgiven" (repaid by the state) in exchange for services. Three, students who plan to pursue a course of study leading to service in some career may borrow from a separate program loan fund to help pay for their education. Then, upon graduation, they "repay" their loans by service in the specific career for a certain length of time.

These programs have a special appeal to legislatures and policymakers in that they target funds directly toward meeting some specific perceived manpower need. They also provide assurance that aid recipients will work toward meeting that manpower need or the dollar investments in aid to the students will be

returned to the state. Thus the programs represent low-risk investments of public funds. They generally have not been in operation long enough to determine whether they achieve desired results.

The survey revealed that 26 states have one or more of these categorical aid programs in operation for 1985-86 and another state, Missouri, plans to implement one in 1986-87 (see Table 25). Most of the programs are directed toward prospective teachers, generally in the fields of mathematics and science.

Of the 35 programs in the 26 states, 15 are designed to provide incentives to students to teach math and/or science. Ten of the 15 programs are addressed specifically toward math and/or science teachers while five include additional areas, such as computer science or special education. Five programs in four states (California, Florida, South Carolina, and Texas) are targeted for students who plan to teach in "critical shortage" areas or subjects as defined by their legislation. Massachusetts and North Carolina have programs that are directed toward teachers in general. Five states' programs are intended to attract more academically skilled students to the teaching profession. These states are Connecticut, Kentucky, Maine, South Dakota, and Utah. So in all 27 of the 35 programs are for prospective teachers.

The remaining programs are most often directed toward meeting needs of the health professions. For example, Indiana has a program to forgive loans for nurses employed in hospitals and nursing homes and for physicians who practice in rural areas of Indiana. New York's program forgives loans of physicians who practice in rural and urban "designated physician shortage areas." Mississippi also has a loan forgiveness program for rural physicians. Kansas has two programs to forgive loans for students who practice osteopathic medicine or optometry in that state. Texas has a Physician Loan Repayment Plan in which up to \$3,000 per year of loan principal is repaid for service in medically underserved areas or for service within key state agencies. Nurses' loan debts will be forgiven for services to Virginia.

The terms of the loan forgiveness programs are quite varied in amounts forgiven for time in service and their "penalties" for failure to meet service obligations are quite diverse. Generally one year of loan debt is forgiven for one year of service.

TABLE 20

ARE THERE SIGNIFICANT CHANGES IN YOUR CURRENT PROGRAMS OR OPERATIONS PLANNED FOR THE 1986-87 AWARD YEAR? IF SO, PLEASE DESCRIBE THOSE CHANGES AND INDICATE IF THEY ARE PLANNED FOR LEGISLATIVE OR ADMINISTRATIVE REASONS

RESPONSE

Plans are underway to propose to the Legislature a need-base

3. Raise SSIG award to \$500, KTG maximum to \$1,200 for

Michigan Legislature has appropriated funds for two new

Resulting from recent program expansion of \$38.5 million,

major scholarship delivery system enhancements are scheduled for 1985-86. The Massachusetts Legislature and scholarship staff are studying the issues of indexed financial need

programs. The enabling statutes have not yet been approved. In 1986-87 the main Scholarship and Grant Program will be

During the 1986-87 academic year, we anticipate the develop-

ment of procedures that will result in improving the flow of information and data between New Jersey lenders, postsecondary schools, and the department. This will reflect the status of modern technology. In a second initiative, the department will increase the validation performed on students receiving assistance under programs administered by the department.

available to students who are enrolled at least half-time.

New computer software package will be used student grant

	Merit Scholarship Program. This new program would be the SSIG
	matching program.
Arizona	A requested increase from \$250,000 to \$300,000 in our state
	appropriations for matching funds.
California	The Commission will request additional numbers of grants and
	increased grant maximums for the 1986-87 award year. There is
	legislation pending which may introduce a parental contri-
	bution ceiling in the Cal Grant A Program.
Connecticut	Academic screen in Achievement Grant Program is being
	broadened because of declining numbers of high school
	graduates.
District of Columbia	If authorized, we will develop a Work-Study Program in
	conjunction with the SSIG Program.
Indiana	Planning a wrap-around for the financial aid form with state
	specific instructions and a continuing of the simplified
	award system.
Iowa	The state legislative process has stiffened the eligibility
	requirements for the 2-year old Science and Mathematics Grant
	Program. Students must now acquire 8 instead of 7 course
	credits in mathematics and science and 4 instead of 3 of
	these courses must be advanced courses.
Kentucky	If approved by KHEAA Board:
	1. Plan to request sufficient funds for 1986-87 to award all
	eligible state grant filers;
	 Plan to raise Total Expected Family Contribution cut-off
	from \$800 to \$1,000 for SSIG eligibility and;

maximum KHEAA award of \$1,700.

rather than a strict cut-off for eligibility.

This was a legislative mandate.

program processing -- administrative.

STATE	RESPONSE	
Oregon	As a result of legislative action, Oregon residents attending eligible institutions in the State of Washington will be eligible for Oregon State Need Grants for 1986-87.	
Tennessee	Plans are being made to automate the current grant program (TSSA) through on-line administration as opposed to the current batch operation. We are also working to give an estimated state grant on the ACT-CFAR, and CSS - FAFNAR for schools.	
Virginia	Increased emphasis on research to determine effects of state student aid programs. Also plan to intensify training of financial aid officers and program review (administrative).	
Washington	The Legislature has established in the appropriations act that "the Council's first priority shall be to provide financial assistance to the core of students with extremely	

high unmet need."

TABLE 21

IS YOUR STATE PLANNING TO IMPLEMENT NEW AID PROGRAMS IN 1986-87 OR 1987-88? IF SO, BRIEFLY DESCRIBE THEM AND THEIR PURPOSE.

STATE	RESPONSE
Arizona	Undetermined at this time, though there is a very slight chance that the Legislature could consider a work-study component to SSIG if that option is made available in reauthorization.
District of Columbia	If authorized, we will develop a Work-Study Program in conjunction with the SSIG Program.
Florida	Graduate: Master's Fellowship Loan Program for Teachers - to encourage liberal arts graduates and science graduates to obtain a Masters Degree in Education. Florida Graduate Scholars' Fund - scholarship for outstanding students. Undergraduate: "Chappie" James - Most Promising Teacher Scholarship Program - scholarship/loan for four years of undergraduate work.
Illinois	None are presently on the books as new statutory programs; however, the state is considering development of a State Work-Study Program.
Iowa	For academic year 1986 and 1987, the State of Iowa has appropriated funding for the implementation of 2 new financial aid programs. Both are intended to encourage teachers and potential teachers to concentrate their preparation in critical teaching areas. The first is the Forgiveable Loan Program to assist educational students in their financial aid package. The second is the Summer Institute Program designated to enhance the teaching qualifications of teachers.
Kansas	The Kansas Board of Regents support a merit-based Scholarship Program. Efforts will be continued during the next legislative session to convince the Legislature of the need for such a program. With its implementation, we hope to attract the top Kansas Scholars to higher educational institutions in Kansas.
Kentucky	Kentucky Distinguished Scholarship Award Program The Kentucky Distinguished Scholarship Award Program will recognize and reward academic excellence among talented students by providing financial assistance to encourage attendance at Kentucky's colleges and universities. Kentucky Distinguished Scholarship Awards will be offered to students who demonstrate the highest capabilities for successful college study. Awards will be made on the basis of both merit and need. One hundred scholars will be granted a Recognition Award of \$500 each. Those scholars who can demonstrate need will additionally receive a Monetary Award sufficient to eliminate the financial barriers for attending the eligible Kentucky
	institution of their choice. Monetary Awards will be offered to the scholars for the duration of their undergraduate program to the extent funds are available.

STATE RESPONSE

	<u> </u>
	Teacher Incentive Loan Program
	The Teacher Incentive Loan Program, a newly legislated
	program, will encourage academically outstanding students
	to enter the teaching profession in Kentucky. Eligible
	students will receive loans which will be forgiven - one
	annual loan for each year of teaching.
Massachusetts	A major initiative to fund part-time students is under
. Indoord of the state of the s	serious consideration. Currently only one limited state
	program is available for part-time students.
Michigan	Michigan is anticipating two new programs for 1985-86.
MICHIGAN	
	1. College Work-Study Campus based program similar to
	federal work-study.
	2. Independent Student Grants Awards for non-traditional
	students.
Minnesota	Minnesota will develop a Summer Scholarship Program for
	high school students and an Income Contingent Loan Program.
Missouri	Yes - Prospective Teacher Loan Program = Name: Missouri
	Prospective Teacher Loan Program: Awarded to eligible
	students enrolled in an approved teacher education program
	at a participating Missouri institution.
New Hampshire	Yes. New Hampshire will inaugurate a new Governor's Merit
	Scholarship Program for 1986-87. Grants of at least \$1,250
	will be made to high school valedictorians attending a New
	Hampshire institution and remaining funds will be distri-
•	buted to those with highest combined SAT scores. The funding
	level is \$125,000.
37 7	
New Jersey	It is hoped that during the 1986-87 or 1987-88 academic year
	legislation will be enacted that will permit the department
	to administer a state Work-Study Program that will compliment
	the federal Work-Study Program and also permit students to
	accept employment within the private sector.
North Carolina	None under active consideration due to efforts to reduce tax
	burden.
Pennsylvania	Legislation will likely be introduced that will establish a
_	State Grant Program for part-time students and those enrolled
	in one year programs.
Rhode Island	We have established a need-based award program in conjunction
	with the state's penal institution and the Community College
	of Rhode Island. Incarcerated students are able to take a
	minimum of 4 three-credit courses at the Community College.
Tennessee	The state is developing an endowed scholarship program for
Teimessee	academically superior students to encourage them to remain in
-	
	Tennessee for their postsecondary education.
Utah	The pilot State College Work-Study Program is now scheduled to
	begin implementation July, 1986.
Vermont	Beginning fall of 1985, Vermont Student Assistance Corporation
	instituted a program for students enrolled in non-degree
	programs.
Virginia	State Work-Study Program is funded. Program is already
-	authorized and funds have been requested by the Council in
·	the addendum to its biennial budget.
Washington	No new aid programs known at this time although others may be
	introduced during the 1986 session.
	Included duling one 1000 bession.

STATE RESPONSE

West Virginia	Legislation may be reintroduced for the creation of a	
	scholarship/loan program with forgiveness provisions for	
	math and science education students.	
Wisconsin	Minority Student Grant Program of \$500,000 in 1986-87 for	
	Blacks, Hispanics, and American Indians enrolled in private	
	non-profit institutions in Wisconsin.	

TABLE 22

WHAT ARE THE MOST IMPORTANT CONCERNS OR POLICY ISSUES FACING YOUR AGENCY THIS YEAR?

STATE	RESPONSE
Alabama	Efforts to continue a state need-based grant program if SSIG funds are eliminated.
Arizona	Laying the groundwork with the Legislature to provide full matching appropriations for SSIG for 1987-88 if the reauthorization requires that all SSIG matching funds must come from state appropriated funds.
Arkansas	Should we give state scholarships to part-time students.
California	A parental contribution (PC) ceiling in the Cal Grant A Program in addition to or as a replacement of the current variable income ceiling; using PC as a ranking device in selection.
Colorado	The proper relationship between tuition costs and financial aid, i.e., how far can tuition increase before access is threatened, how much financial aid must be provided to ensure access? Creation of a Unit Record Reporting System which will require more comprehensive reports from institutions. Institutions agree with the concept, but reluctant to commit their resources to conform to the specific reporting requirements.
Connecticut	There seems to be a greater responsiveness by the legislature to create new programs that have appeal to specific constituencies than to significantly increase funding for existing need-based programs.
District of Columbia	The program is operating smoothly. Should funds be eliminated, we will have a serious problem.
Florida	Increased staffing and development and expansion of data based computer systems.
Georgia	Increasing state funding of the SSIG program.
Illinois	Increased funding of the state Monetary Award Program to accommodate all applicants and respond to increases in college costs. Identify and implement alternative methods to finance the administration of the Guarantee Loan Program after the major restructuring at the federal level. The final implementation of new rules governing state financial aid programs.
Iowa	Iowa is concerned with the level of indebtedness college graduates are now carrying. The state is interested in doing what it can to reduce this financial burden by providing grants and scholarships as well as providing some equalization in the cost of independent tuitions as compared to public institutions. Additionally, the Iowa College Aid Commission is shifting their data processing function for grants and scholarships from a commercial contractor to the state's data processing department.
Kentucky	The important issues facing KHEAA is continuation and increase of programs and services for residents of Kentucky in response to reauthorization and federal allocations.
Louisiana	Funding
Maine	Funding and award values are annually under discussion.

<u>STATE</u> <u>RESPONSE</u>

<u> </u>	
Massachusetts	The following issues are currently under study:
	1. Adequate administrative support in response to the major
	increase.
	Delivery system review for existing programs and new
	program initiatives.
	 Study of relative need/indexed need.
	4. Program for part-time students.
,	5. Treatment of independent students.
Michigan	Designing and implementing rules and regulations for two new
	programs.
Minnesota	MHECB will analyze the cost of attendance and need analysis
	used in the Scholarship and Grant Program and plan for
	campus-based alternate delivery system to be piloted in
	1987-88. MHECB will study the possibility of expanding
	work-study opportunities and design an income contingent
	loan repayment model. MHECB will implement a summer
	scholarship program for high school students.
Mississippi	Funding, defaults, and proposed changes in regulations by
	U.S. Department of Education.
Missouri	Increased funding to fund additional students. Student
	attempting to live in the state long enough to qualify as a
	resident and become eligible for the Student Grant Program.
New Jersey	One of the most important issues facing this department
- .	during the year will result in the extension of services
	provided to postsecondary institutions, lenders, and the
	department. A policy issue that will be studied during the
	upcoming year will relate to the definition of the independent
	student status and will be aligned with verification
	procedures.
New York	The policy issues likely to be addressed this year would
	include legislative consideration of increases in awards
·	under the major need-based program especially for independent
	students and possibly graduate students. Consideration
	likely to be given to changes to the state programs for aid
	to part-time students, which was established in 1984.
North Carolina	To keep program funding for grants and loans abreast of
	increases in the cost of education. The increasing shift
	to loans as a means of meeting these costs is alarming. A
	balance must be maintained.
North Dakota	Our tuition has increased 90% in the last four years. Without
TOT OIL DUNG-OU	new state programs, or enhanced federal programs, we will
	soon be denying our students access to college, much less
	choice.
Ohio	Part-time students - Should the state establish a program of
· · · · · · · · · · · · · · · · · · ·	financial assistance for part-time students? Less than half-
	time? Specific category of part-time students (i.e., single
	head of household).
Oklahama	
Oklahoma	Ensuring that sufficient funding is available to provide
	student assistance and thereby access to higher education.
Oregon	Most important objective is full implementation of our on-
	line computer system scheduled for some time in 1986.

<u>STATE</u> RESPONSE

Pennsylvania	The impact on state funding requirements which accompany
1 Chingy I vanita	possible enactment of eligibility for part-time students,
	impact of SSIG retrenchment, and impact of funding require-
	ments which increased cost of education have when coupled
	with stable debt burden limits.
Rhode Island	The agency has a concern about state appropriations to the
	Scholarship and Grant Program being adequate enough to meet
	the need of the student. With tuition costs constantly on
,	the rise, the money appropriated through the General Assembly
	to meet the need of the student will fall short and less
•	studens will receive aid.
South Carolina	1. Insufficient Funds: 1,000 - 1,200 unfunded eligible
201011111111111111111111111111111111111	applications in 1984-85.
	2. Grant Effectiveness: Size of grant is not keeping up
	with rapidly increasing cost of attendance - In 1973-74
	average grant covered 50.3% of average cost of South
	Carolina independent colleges: In 1984-85, average
	grant covered 30.5% of average cost.
Tennessee	1. Increased maximum awards to students attending private
	postsecondary education.
	2. Funding of proprietary education through the State Grant
	Program (TSAA).
Vermont	Need for increased funding.
Virginia	In terms of Financial Aid Policy, the most pressing issues
VIIGINIA	are:
	1. Rising loan debt of college students.
	2. Whether state aid should be extended to non-traditional
	students, particularly part-time students.
Washington	As of January 1, 1985, the newly formed Higher Education
	Coordinating Board will assume all responsibilities of the
	Council for Postsecondary Education, including administration
	of the state's student financial aid programs. The Board is
	required to study the delegation of the Agency's
	administrative duties, and report back to the Legislature.
West Virginia	The inability of the program to meet the increased demand
y	for aid caused by the escalation of costs. A contributing
	factor continues to be the depressed economic conditions
	which reduce the expected contributions of aid applicants.
	Therefore, greater numbers of students qualify for
	assistance. The role of the program as it relates to
	student indebtedness.
Wisconsin	A study is getting underway to examine the Agency's grant
	and self-help program, and to determine if existing programs
	should be changed/merged, and whether new programs should be
	developed for the 1987-89 Biennium. Study to be completed
	by May, 1986, and the results to be considered for inclusion
•	
	in the budget which must be completed by September, 1986.
A Committee of the Comm	
	It is also probable that the Legislature's staff will also have proposals for changes for 1987-89 as well.

TABLE 23

IF THE SSIG LAW AND REGULATIONS WERE CHANGED TO MAKE IT POSSIBLE TO USE YOUR STATE'S FEDERAL ALLOCATION TO FUND A WORK-STUDY PROGRAM, IN WHAT WAYS MIGHT YOUR STATE REACT?

We would lose our state grant program funding entirely.

We would maintain our program but the state legislature would reduce its appropriation by the amount of the lost SSIG allocation.

We would maintain our program and the legislature would make up the lost SSIG allocation, at least in part.

We would maintain our program at the reduced level of funding represented by lost SSIG funds.

Washington	X
West Virginia	X
Wisconsin	X

^{*}It is possible that increases in the program that might otherwise have been enacted would be deferred or reduced because of the need for the additional state funding.

MANY STATES HAVE RECENTLY IMPLEMENTED "LOAN FORGIVENESS" PROGRAMS OF ONE KIND OR ANOTHER IN WHICH STUDENTS RECEIVE FORGIVENESS OF ALL OR PORTIONS OF THEIR EDUCATIONAL LOANS IN EXCHANGE FOR SERVICE OF SOME KIND TO THEIR STATES OR COMMUNITIES. IF YOUR STATE HAS ANY SUCH PROGRAMS IN 1985-86, PLEASE BRIEFLY DESCRIBE THEM.

STATE	DESCRIBE			
Alabama	The Emergency Secondary Education Scholarship Program was established in 1984-85 as a loan forgiveness program in "critical needs" areas of teaching. The first year this was limited to juniors and seniors in math or science education. For 1985-86, this has been expanded to include special education. A recipient is required to teach three (3) years in Alabama or repay the \$3,000 loan.			
Arkansas	Math/Science - Maximum \$2,500 per year forgiven at a rate of 20% per year of teaching. Teacher Loan-Forgiven at a rate of 6 hours for one year of teaching maximum tuition and books.			
California	In 1985-86 about 500 teachers or prospective teachers will have \$2,000 of their educational debt repaid in California's new Assumption Program for Loans in Education (APLE). This program encourages teachers into teacher shortage areas by paying up to \$8,000 of their educational debt; \$2,000 the first year, and \$3,000 in the two following years. About \$1,000,000 will be spent in 1985-86 in this program.			
Connecticut	Connecticut has two loan forgiveness programs. The Teacher Incentive Loan Program is to encourage teaching in five curricular areas: chemistry, physics, mathematics, industrial arts, and speech and hearing. Loans are available to full-time college juniors, seniors, and graduate students enrolled in teacher education programs in one of these five areas. Students may borrow \$3,000 a year at public colleges and \$5,000 a year at private colleges for up to two years. Recipients are nominated by their Connecticut college deans of schools of education. Loans are forgiven at a rate of 20% per year for each year of teaching in Connecticut in one of the five shortage areas. No interest is charged. If students choose other careers or fields of teaching, they must repay their loans at a rate of interest equal to 1% above state bond rates. Loans are not need-based.			

The Connecticut Educational Loans to Encourage Excellence in Teaching (ELEET) program is designed to encourage teaching in all disciplines in Connecticut by students with above average academic potential. Loans are available to full-time undergraduates who are residents and intend to teach in the state, regardless of where they attend college. Part of the loan recipients are selected solely on merit (60%) and part are chosen on the basis of merit and financial need (40%). Students may borrow \$3,000 per year up to \$12,000 at public colleges and \$5,000 per year up to \$20,000 at private colleges. Awards are renewable each year provided students continue to meet academic

STATE DESCRIBE

	
	requirements. Recipients must have combined SAT scores of 1200 or above or combined SAT scores of 1000 plus a high school class rank in the top fifth of their graduating class or a minimum college GPA of 3.3 after completing 15 semester hours. Loans are forgiven per years of teaching in Connecticut schools on this schedule: one year, 10%; two years, 25%; three years, 45%, four years, 70%; and five years, 100%. Students who choose not to teach must repay their loans with interest at 1% above the prime rate.
Florida	Repayment assistance of GSL or NDSL at \$2,500 or \$5,000/ year up to \$10,000 for certified teachers teaching in a critical teacher shortage subject area. Teaching service forgives up to \$4,000 for Scholarship Loan by forgiving 25% the first year, one-third of the balance the second year, 50% of the balance the third year, and the remainder the fourth year of teaching.
Georgia	For the 1985-86 school year, the state has allocated \$2,090,000 for "loan forgiveness" programs. The areas involved are paramedical, national guard, special education, agriculture, mathematics and science teachers. The forgiveness policy allows cancellation at one year of service per each year of loan funds received. The state legislature, by establishing these programs, hopes to attract persons into these areas which have been designated as "critical shortage areas". For the 1985-86 academic year we anticipate making approximately 1,500 loans to students with the option to repay by service, and we will have approximately 1,500 persons actually repaying by service in the state during 1985-86.
Indiana	We have two loan forgiveness programs. The first is for teachers who teach shortage subjects in the public schools. Math and science were originally designated as shortages, but now, in the third year the shortages include math, physics, chemistry, special education, and any area of junior high/middle school. Forgiveness of up to 50% of debt or \$2,000, whichever is less is allowed but funding has limited awards to about one-half of maximums. Funding increased this year from \$50,000 to \$150,000. We also received an anonymous donation of \$25,000 this year. The second program is in two parts. The Nursing Loan Forgiveness Program aided nurses employed in hospitals and nursing homes, but the last awards were just given and no further funds are forthcoming. The medical program offers loans to medical students which forgiven if they practiced primary care in a shortage (usually rural) county. Funding has been sporadic. Currently funds are derived from loan repayment income. There has been discussion concerning a new medical program which would provide grants to M.D.'s at the point of practice if they located in rural areas. The proposal involves a funding match from the community involved.

STATE DESCRIBE

Kansas	Osteopathic Loan Program: Ten freshmen are selected annually to participate in the Kansas Osteopathic Loan Program and may contract for a \$10,000 loan (or cost of tuition) each
	academic year for a maximum of four years. Forgiveness of
	loans is based on a year of service in Kansas for each loan
	received; or they may choose to repay the loans at 15%
	interest. In 1985-86 there were 44 recipients receiving loans for a total of \$435,147.
	Optometry Loan Program: This program started with the
	1985-86 academic year. Kansas residents enrolled in the
	Houston College of Optometry are eligible to participate.
	Twenty-seven Kansas residents each received \$4,000 (cost
	of tuition) for a total of \$108,000. Forgiveness of loans
	is based on a year of service in Kansas for each loan
	received or repay the loan at 15% interest.
Kentucky	Math/Science Incentive Loan Program
	This program provides loans for both college students and
	existing teachers who are preparing for certification in the
	areas of mathematics or science. To increase the avail-
	ability of qualified teachers in these areas, loans are
	forgiven on a year for year basis for teachers in the math/
•	science fields. This program was implemented in 1982 by
	the Kentucky Department of Education. Fifty-nine loans
	have been paid in full by appropriate services and 55
•	currently are being repaid through services.
	Teacher Incentive Loan Program
	The Teacher Incentive Loan Program, a newly legislated program
	will encourage academically outstanding students to enter the
	teaching profession in Kentucky. Eligible students will
	receive loans which will be forgiven - one annual loan for
	each year of teaching.
Maine	The goals of the Blaine House Scholars Program are to bring
	qualified students into the teaching profession and to
	increase the proficiency of current teachers. This is the
	first year of the program so there are no recipients in
	in forgiveness. Up to 100% of the loan may be forgiven.
Massachusetts	The Teacher Incentive Program provides an incentive for
	qualified students to pursue a teaching certificate and
	remain in Massachusetts as public school teachers. The
	program is funded at a year, level of \$300,000. Program
•	guidelines public colleges awards range from \$1,000 to \$2,000
	independent colleges highest possible award is \$2,000.
	Program allocations awarded to participating colleges and
	universities by the Board of Regents Scholarship Office.
Mississippi	Mississippi has four loan forgiveness programs, two for mathe
	matics and science teachers and two for health science
	students. The Math-Science Teacher Education Scholarship
	Program provides awards of up to \$3,000 per academic year to
γ	junior and senior undergraduates who have been admitted to a
	math and/or science teacher education program at a four-year
	public college in the state. Awards are forgiven as loans

on a year for year basis for teaching math or science in grades 7 through 12. If the recipients do not teach, they must repay the principal on the loan at GSLP interest rates plus damages equal to 50% of the principal.

The Summer Math-Science Teacher Retraining Program provides awards of up to \$1,000 per summer enrollment to persons who hold the teaching certificates but want to become certified in math and/or science. Up to three summers of course work may be awarded. Awards are cancelled at the rate of one summer's award for each semester of teaching math and/or science for grades 7 through 12. Penalty or repayment provisions for failure to teach are identical to those of the Math-Science Teacher Education Scholarship Program described above.

Under the Medical Education Loan Program students may borrow \$24,000, payable at \$6,000 per academic year to finance education in medical or dental school in a state university. Recipients must practice for five years in public health work, a state mental institution, or state charity hospital or in private practice in a rural area of less than 10,000 population. Simple interest at 6% per year is charged on the loan. The principal plus interest is repaid by state public health works. Practice in rural areas repays one-fifth of the interest at the end of the first year and four-fifths of the principal and interest are repaid during the remaining four years. There is a \$5,000 penalty for failure to honor the five-year period of service.

The Nursing Education Scholarship for study in Baccalaureate Nursing Education Program assists students with grants of \$3,000 per year up to \$6,000. Graduates must repay the loan with one year of service for each year of the award. Failure to meet the service obligations requires repayment of the loan at GSLP interest rates.

Missouri Prospective Teacher Loan Program - funding level of \$1,000,000.

The Administrative rule for this new program is still being drafted for approval. Program will be implemented and operational for Fall, 1986, semester.

The Grants are open to New Hampshire residents who agree to practice medicine in New Hampshire for two years following graduation and state licensure. For those who do not practice, the grants become loans (no interest) and must be repaid.

In 1985, the department, in recognizing the shortage of computer science teachers, began offering New Jersey college faculty, having backgrounds in mathematics and science, a loan forgiveness program to earn advanced degrees in computer science. These degree candidates receive GSL funding for tuition costs of the (15 month/2 academic years) two-year program. In return for teaching computer science courses at New Jersey colleges and universities for four years,

Missouri

	participants' loans are cancelled by the state. The depart-
	ment appropriates \$300,000 for each program cycle (2
•	academic years/15months). Twenty-two faculty members
	recently graduated from the 1984-85 program cycle, and it
	is anticipated that in 1986, approximately \$65,000 for the
	aggregrate principal balance will be redeemed. Fourteen
	faculty members are currently enrolled in the 1985-86 program
	cycles.
New York	A Physician Loan Forgiveness Program has been established
•	with the 1985-86 school year. The program provides grants
	of up to \$10,000 per year for up to two years or the amount
	of indebtedness, whichever is less in return for the physician
	practicing in a designated physician shortage area. To be
	eligible, a physician must have completed professional
	training within the last five years. Physicians who
	received a two-year award have first priority in receiving
	a second two-year award. Those who were residents of
	shortage areas or who specialize in primary care also
	receive priority consideration.
North Carolina	The Scholarship Loan Fund for Prospective Teachers encourages
	recipients to teach in public elementary and secondary schools
	in North Carolina. Recipients can be undergraduates who are
	preparing to teach by attending public or private colleges
	in the state or persons already teaching in North Carolina
	public schools who take further undergraduate courses during
	the summer. Recipients may borrow up to \$900 per year for
	four years. Loans bear interest at 6% per annum from
	September 1, following fulfillment of teacher certification
	requirements. Loans are forgiven for teaching service in
	public schools in North Carolina at a rate of \$900 plus
	interest for each year of service. The program is funded at
	\$1,300,000 for 1985-86. Medical, math, and science loans
	\$1,700,000 for 1985-86.
Oklahoma	Goals and purpose: To place teachers in shortage areas of
	math, science, computer learning, and foreign language.
	1985-86 Funding: \$200,000
	Estimated Recipients: 50
·	Estimated Total Dollar Amount: \$170,000
	Provision: One academic year's loan amount forgiven for
	each year's teaching service.
Pennsylvania	Encourage current math or science teachers to remain in the
	field (and encourage others to enter) by forgiving 25% (not
	to exceed \$2,500) of student loan indebtedness for each year
	of teaching. For 1985-86, it is estimated that a total of
	\$190,000 will be forgiven for approximately 200 teachers.
South Carolina	Teacher Loan Program (2.5 million in 1985-86): Allows
	forgiveness of loans at a rate of 20% for each year of teacher
	service in a designated region in South Carolina. Designed
	to attract quality teachers into areas where teacher
	shortages exist. In 1985-86, approximately 15 individuals
	will have \$7,500 in loans forgiven.

<u>STATE</u> <u>DESCRIBE</u>

	
South Dakota	South Dakota Educational Excellence Scholarship Program \$10,000 funding. Monies given to full-time students in a South Dakota public college enrolled in approved teacher education program. Grants shall not be less than \$1,000 nor more than \$2,000 per school year. Depending on size of awards 5 to 10 students will receive. Students must graduate with bachelor's degree in teacher education and complete at least one year of employment within an accredited South Dakota school for each grant award received. Total forgiveness given if all stipulations of teaching are met. Students who do not meet the stipulations shall be required to repay full amount of the grant award in amounts and schedule determined by state superintendent.
Tennessee	A Teacher Loan/Scholarship Program to encourage certification in the shortage areas of math and science. 1985-86 is the second year of operation. Currently, \$300,000 is available in the program with over 200 recipients. Loan forgiveness is due to start in 1986-87.
Texas	Texas has two loan forgiveness programs for teachers, the Teacher Education Loan Program (TELP) and the Future Teacher Loan Program (FTLP). The TELP is designed to encourage practicing teachers to become certified in subject areas where there are shortages and to encourage students to teach in public schools in Texas. Practicing teachers who return to school for certification in a teacher shortage subject area may receive TELP loans of up to \$1,000 per semester based on course loans. Enrolled juniors, seniors, or graduate students may borrow up to \$1,000 per semester up to a limit of \$4,000. Borrowers must maintain a "B" average and be enrolled at least half-time. Loans are cancelled by teaching in a shortage subject area at a rate of one semester's loan for one semester of teaching. Failure to teach requires repayment of loans at a minimum of \$50 per month at a simple interest rate set by the Commissioners of Higher Education.
	The FTLP encourages students to seek certification in and teach subjects designated as in critical need of teachers. Qualified undergraduate or graduate students may borrow up to \$2,500 in a fiscal year but no more than \$5,000 in total. Students must demonstrate financial need, be enrolled at least half-time and have and maintain a "B" average. Loan repayments are cancelled by teaching service as follows: after the borrower has taught in a shortage area for two school years, half the principal balance plus accrued interest is cancelled; after two more years of teaching, the remaining half of the debt is cancelled. Borrower must teach two years to cancel the first half of the debt and two additional years to cancel the last half of the debt.
	Texas also has a Physician Loan Repayment Plan in which up to \$3,000 per year of loan principal repayment is made for service in medically underserved areas or service within

key state agencies.

SECTION V DISTRIBUTION OF UNDERGRADUATE NEED-BASED AID AMONG STUDENT CATEGORIES

Each year the survey asks respondents to estimate the percentages of recipients and award dollars received by students in various categories. Not all program respondents can answer all the requests because the data are not collected or are not available from the files. However, from one-fourth to over nine-tenths of the state-supported need-based aid for undergraduates is represented in the various item response categories. Therefore, the respondents' estimates probably provide a realistic if not totally statistically reliable picture of some important characteristics of students who receive state grant aid. Moreover, because in succeeding years of the survey the same program respondents usually answer the same items, some year-to-year comparisons are possible — if caution is used in the interpretation of the data. (The data referenced for earlier years appeared in previous NASSGP survey reports.)

Table 26 shows that about 95.4 percent of the aid is received by students who are enrolled full-time. This represents a downward trend since 1981-82 when over 99 percent of the aid was received by full-time students. Put another way, part-time students are receiving increasing percentages of state grant aid. For example, in 1981-82, 46 states reported awarding \$6.1 million to 13,000 students. But in 1985-86, 41 states expect to award \$43.5 million to 55,000 students. Much of this sharp increase in awards to part-timers has occurred just this year. Last year 46 states expected to award only \$19.8 million to 19,000 part-timers. Thus it is quite clear that part-time students' access to aid from state grant programs is growing dramatically.

This year about half the aid, 49.8 percent, is expected to go to students who have previously received grant awards from their state programs. In 1981-82, 60.3 percent of the aid was received by these students. In 1985-86, 24.0 percent of the award dollars are expected to go to students who graduated from high school in 1985. In 1981-82, 30.2 percent of the aid went to students who had just graduated from high school. These two trends reveal a third and perhaps more important trend. Increasing percentages of aid dollars are being awarded to students who are in their first years of school but have been out of high school for more than one year, from just 3.6 percent in 1981-82 to 12.3 percent in 1985-86. This suggests that many more state grant recipients are older students who are just returning to school after engaging in some other activity and it suggests that increasing numbers of students are finding it necessary to apply for aid to meet their ever-rising costs of education.

From 1981-82 through 1984-85, about 91 percent of the state grant aid went to students attending two-year and four-year, public and private colleges. This year only 87.5 percent of the aid is expected to go to these types of students. Increasing percentages of the aid are going to students for study at private, proprietary, and public business, trade, and technical schools. For example, in 1981-82, only 5.6 percent of the aid was received by such students. But in 1985-86, 10 percent is expected to go to them. In 1981-82, 35 states reported providing \$54 million to 60,000 such students. This year 37 states expect to award over \$120 million to almost 89,000 students in business, trade, and technical school programs. Therefore, in both relative and absolute terms, there has been a major increase in these students' access to state grant aid. The distribution of award dollars among different types of college students has remained quite stable throughout the 1980s.

Virtually all aid recipients are residents of their states (99.9 percent) and almost all (96 percent) are United States citizens. There has, however, been a significant growth in numbers of recipients who are permanent residents or refugees. In 1981-82, only about 5,100 such students received about \$3.5 million. This year about 15,000 such students will receive \$16.8 million.

Dependent students continue to receive the vast majority of aid. This year 70.4 percent of the recipients will be dependent on their parents for financial support and receive 71.8 percent of the aid. These percentages are almost identical to the ones reported in 1981-82. The majority of recipients for whom genders are known are female. In 1985-86, nearly 57 percent of the recipients are female. In 1981-82, 59 percent were female. The percentages fell in this range in the intervening years.

Decreasing numbers and percentages of recipients are Black students. For example, in 1981-82, 25.1 percent of the state grant recipients of 21 states who reported data on racial-ethnic memberships were Black. By 1985-86, only 17.8 percent were Black. In 1981-82, Black students received 23.9 percent of the aid. This year they are expected to receive only 14.9 percent of all the aid. Last year 19.6 percent of the recipients were Black and they received 16.8 percent of the aid. So the "long-term" downward trend is accelerating. Last year 15 states reported that they would award \$50.6 million to 65,000 Black students. This year 18 states reported they would award \$53 million to 65,000 Black students. Last year's responding states awarded 25.1 percent of all the aid and this year's responding states awarded 27.3 percent of all the aid. Therefore, it is almost certain that the number as well as the proportion of Black aid recipients is declining.

The other significant trend in the racial-ethnic group memberships of aid recipients is that the number and percentages of Oriental or Asian-American recipients are increasing. In 1981-82, only 3.2 percent of the recipients were identified as Oriental. This year's percentage is 5.5 percent. In 1981-82, 21 states awarded aid to about 12,000 Asian-Americans. This year, 18 states expect to aid 20,000 such students.

It is well-known that the population of postsecondary education enrollees is increasingly comprised of older students. So is the state grant recipient population. In 1981-82, 75 percent of the aid recipients were 18 to 21 years of age. This year only 63.3 percent will be in this age group. This year an estimated 19.1 percent will be age 26 or older. In 1981-82, only 11.8 percent fit this description. The trend toward receipt of grant aid by older students is an accelerating one. For example, last year only 16 percent of the recipients were 26 or older. So an additional three percent has been added in just a single year.

The median income of this year's aid recipients is about \$12,700. Last year's median was quite similar, at about \$12,300. The lower half of the income distribution for 1985-86 is expected to receive 47.4 percent of all the aid dollars. Last year they received an almost identical proportion of the aid. The probable reason why students in the upper half of the income distribution receive more than half the aid is that higher income students are slightly more likely to attend higher-cost four-year colleges where their financial need and, consequently, their average awards are greater. For example, the expected average award to students with less than \$10,000 family income is \$956, while the average award to students from families with incomes above \$40,000 is \$1,161.

It is interesting to note that the median family income of all 1981-82 recipients was about \$12,600 or just \$100 less than the 1985-86 median. Given the fact that incomes generally have grown in the period under examination, this suggests that greater proportions of lower-income students are being served by grant programs now than in 1981-82. Perhaps state grant aid programs are increasingly targeting aid toward the lowest income aid applicants.

In summary, five important trends appear in these data on aid recipient characteristics. One, more part-time students are receiving grants from state programs. Two, proportionately more older students are receiving grants. Three, significantly fewer members and proportions of students who are Black are receiving awards. Four, state grant awards continue to flow to the lowest income members of the applicant pools. Five, students attending the non-collegiate sector of postsecondary education are receiving increasing shares of the state grant award dollars. All five of these trends are continuations of trends observed in last year's data.

Numbers in parentheses indicate the percentage of $\underline{\text{all dollars}}$ represented by the amounts in the samples.

SECTION VI TRENDS IN NEED-BASED UNDERGRADUATE AID DOLLAR VOLUMES BY STATES

This year is not as exceptional as 1984-85 when most states saw at least some if not significant increases in need-based undergraduate grant dollar volumes. However, this year continues some trends observed in earlier reports and it sees some potential new trends. Table 27 displays the dollar volumes of grant programs for 1979-80 through 1984-85 and the expected volumes for 1985-86 for the 50 states, the District of Columbia, and Puerto Rico. This section of the report analyzes those data.

The vast majority of the aid dollars are awarded by just a few states, a pattern that has been observed in all earlier reports. In 1979-80, the 16 states with the largest current dollar volumes awarded 88 percent of all the aid. In every year since 1979-80 those same states awarded a similar percentage of all aid dollars. Until this year, the top four states (New York, Illinois, California, and Pennsylvania) awarded more than 58 percent of the aggregate aid. This year those states' percentage of the aggregate slipped to 56 percent because their growth rate was only 7.8 percent while the growth rate for the remaining 48 states/territories was 17.8 percent. Since 1979-80, the four states with the largest programs have increased their award dollar volumes by 47 percent. The remaining states' volumes have grown by 72 percent. So "long term" program growth in states with smaller programs has been more dramatic, at least as measured by percentage rates.

The largest percentage growth in dollar volumes was experienced in the aggregate award volumes of 12 states that have awarded annual amounts of at least \$10 million since 1982-83. These 12 states increased their aggregate awards by 80 percent between 1979-80 and 1985-86, from \$232.5 million to nearly \$419 million. To put this 80 percent growth rate into another perspective, these 12 states will award only 32 percent of the 1985-86 dollars but the growth in their dollar awards represents 40 percent of the total growth in all state grant aid since 1979-80. Three of these 12 states (Massachusetts, Minnesota, and Puerto Rico) have more than doubled their award dollars since 1979-80 and Michigan missed doubling its award volume by just \$1.6 million.

The aggregate dollar growth rate of the eleven states with programs that currently award over \$7.5 million but do not rank in the top 16 was 63 percent between 1979-80 and 1985-86. That growth rate is slightly less than the rate for the 12 states with larger programs, 80 percent. Four of these states (Oklahoma, Rhode Island, Tennessee, and Washington) more than doubled their current dollar volumes in those years.

The aggregate dollar growth rate of the 13 states that historically have awarded more than \$1 million but less than \$5 million annually was only 39 percent. However, three of these states (Arkansas, New Mexico, and South Dakota) each more than doubled their dollar volumes between 1979-80 and the current year.

The 12 states with the smallest programs, generally less than \$1 million per year, experienced just a 12 percent aggregate dollar growth rate between 1979-80 and 1985-86. South Dakota more than doubled its annual volume. But Alaska, the District of Columbia, Hawaii, Idaho, and Montana increased their award volumes by less than ten percent and two states, Maine and Wyoming, will award fewer dollars in 1985-86 than in 1979-80. Only two other states, Colorado and Mississippi, will award fewer dollars this year than in 1979-80.

In Section II it was noted that 1984-85 saw more states increase their award dollars above the previous year than expect to increase awards this year. Annual program growth in state aid is sporadic for most states in that some years of growth are followed by losses. In fact only Illinois, Rhode Island, and Vermont have experienced annual increases in award dollars in every year since 1979-80. Every other state has experienced at least one year in which volumes were less than a preceding year. In 1980-81, 1981-82, and 1982-83 each year 19 states experienced losses of dollars over some preceding year. In 1983-84 24 states experienced losses of dollars from 1982-83. But in 1984-85 only four states experienced losses and none were included in the 24 "losing" states of 1982-83. This year only three states' dollar volumes are less than those of 1984-85 and none were states that lost award dollars between 1983-84 and 1984-85.

States seldom experience two consecutive years of losses. Since 1979-80 that has occurred only 14 times. However, five states (Idaho, Indiana, Kansas, Nevada, and New Hampshire) experienced three consecutive years of losses and Maine experienced four consecutive years of losses. Only three states that have experienced two or more consecutive years of losses annually award more than \$8 million. They are Indiana, Kentucky, and Missouri. So the states which have experienced two or more consecutive years of losses generally have very small aid programs.

The sporadic growth of aid programs is important because it lends a new viewpoint to interpretations of annual rates of increase in aggregate grant awards. Aggregate awards from all states have increased annually since 1979-80 (and since the first year of the survey, 1968-69) but discussion of those increases often tends to disguise the fact that state grant aid program growth is not linear nor constantly upward.

There is another way to evaluate the growth patterns of state grant programs and that is to compare them to growth in costs paid by state grant recipients. Since 1979, average total costs at public four-year colleges have risen by about 63 percent, average costs of attending four-year private colleges have risen by about 75 percent. More public college students than private college students receive state grants (see Table 25) and, therefore, the average costs paid by all state grant recipients have increased by more than 63 percent but less than 75 percent. A good assumption is that costs generally have increased by at least 70 percent.

Using this percentage as kind of benchmark, the data in Table 27 can be evaluated to determine which state's program dollar volumes have grown at a rate in excess of costs. None of the top four states' volumes have kept pace with costs increases. Only four of the top 16 states have experienced program growth since 1979-80 which exceeds the growth rate of costs. They are Massachusetts, Michigan, Minnesota, and Puerto Rico. Dollar volume growth in Ohio may have kept even with cost increases there and program growth rates may be close to cost rate increases in New Jersey and Texas. But it is certain that costs have increased at a much greater rate than grant dollars in at least nine of the 16 states with the largest programs. In four of these states costs have grown at a significantly greater rate than award dollar volumes. They are Indiana, Pennsylvania, South Carolina, and Wisconsin.

The situation is somewhat better among the eleven states whose programs award at least \$7.5 million annually. Six states (Kentucky, Oklahoma, Rhode Island, Indiana, Vermont, and Washington) have programs whose volumes have grown at a greater rate than have costs. But costs grew at a much greater rate than award dollars in Colorado, Maryland, Missouri, and Oregon.

Among the 25 states with the smallest programs, only five experienced growth rates in excess of increases in costs by their program recipients. They are Arkansas, Louisiana, New Mexico, South Dakota, and West Virginia. Costs grew at much greater rates than award dollars in 15 of the 25 states.

So among all 52 states/territories program dollar volumes grew at greater rates than costs in just 15 instances (29 percent). On the other hand, costs grew at much greater rates than grant dollars in 28 instances (54 percent). In the remaining nine state instances, program growth rates were roughly parallel to increases in costs.

It is clear that over the "long-term," i.e. since 1979-80, state grant program growth has been constant in terms of aggregate dollar volumes but sporadic in terms of annual year-to-year growth among individual states. Furthermore, the growth in costs paid by grant recipients in most states has outpaced the growth in state grant dollars available to meet those costs in the years between 1979-80 and 1985-86. Therefore, the "long-term" trends in need-based state grant aid program growth generally are pessimistic ones.

The "short-term" trends are more optimistic ones. It was noted earlier in this report that much of the growth in aggregate grant dollar volumes has occurred in the two most recent years, 1984-85 and 1985-86. It was also noted that for these two years all but four states in 1984 and another three states in 1985 increased their award volumes over the two preceding years. These are both optimistic "short-term" trends.

When "long-term" growth in grant dollars was compared to growth in costs paid by grant recipients the results were pessimistic, i.e., recipients' college costs were shown to have grown at a faster rate than grants in a majority of the states. The "short-term" results of this type of evaluation are equally pessimistic. Since 1983-84, four-year college costs have increased by about 25 percent for the typical state grant recipient. Grant dollar volumes have exceeded growth in costs during this time in only 16 states and they have paralleled costs growth in another five states. In the "short-term," costs have grown at a faster rate than grants in 31 states or 60 percent of the total. Therefore, the optimism engendered by recent dollar volume growth patterns for the vast majority of states and by the growth in aggregate aid dollars istempered or reduced by the fact that costs have grown at a faster rate in well over half the states.

However, it is noteworthy that grant volume growth in the "short-term" greatly exceeded increases in costs in five of the 16 states with the largest programs. They are Michigan, Massachusetts, Indiana, New Jersey, and California. But program dollar growth in these five states accounts for 45 percent of the total growth in aggregate state need-based grant aid to undergraduates between 1983-84 and 1985-86, \$115 million of \$256 million.

In summary, in both the "long-term" and the "short-term," aggregate state grant aid dollars are growing, with more of the growth occurring in the two most recent years; in the "short-term" more states have increased their grant award dollar volumes than had done so in earlier years; but, in both the "long-term" and the "short-term," college costs have grown at a faster rate than grant award dollar volumes in over half the states.
